Hybrids may show various combinations of the characters of the two parents, or exhibit new characters or reversion to ancestral ones. Sometimes they resemble one parent but contain in a latent condition characters of the other. (See MENDEL'S LAW, GALTON'S LAW.) It is produced by the action of sulphuric acid on fluorite, and is usually collected as a solution in water. It attacks all silicates, as glass or porcelain, forming silicon tetrafluoride, SiF_4, which passes off as a gas, and fluorides of the metals. It is chiefly used in etching glass, and is kept in vessels of platinum, lead, caoutchouc, gutta-percha, or paraffin.

hy/dro-gen (hī/drō-jĕn), *n.* [F. *hydrogène.* So called because water is generated by its combustion. See 1st HYDRO-, -GEN.] *Chem.* A gaseous element, colorless, tasteless, odorless, inflammable (burning with a hot, almost nonluminous flame), and lighter than any other known substance (sp. gr., compared with air, 0 0695). At. wt., 1.008. Symbol, *H.* Free hydrogen occurs only very sparingly on the earth, though it is abundant in the atmospheres of the sun and many stars. It is combined with oxygen in water, of which it constitutes 11.19 per cent. It is also a constituent of most organic compounds, of acids and bases, ammonia, etc. Its true nature was first recognized by Cavendish. Hydrogen is prepared by decomposing water with the electric current or with sodium, potassium, or the like, by the action of dilute acids on various metals, and by other methods. One liter of hydrogen gas weighs (at sea level, 45° lat., 0° C., and 760 mm.) 0.089873 gram. It can be condensed to a clear, colorless liquid boiling at about −252° C. (the lightest liquid known; sp. gr., 0.07), and to a colorless solid melting at about −259° C. (sp. gr., 0.076). One gram of hydrogen evolves, on burning, 33,950 calories; it is therefore a desirable ingredient of gases for burning. It is absorbed by certain metals, notably palladium. Chemically, hydrogen is the typical monad, or univalent element. Though not resembling the metals physically, it is electropositive and is the positive ion (H+) of all acids. It is also the typical reducing agent (see REDUCE, *v. t.*, 7). Gaseous hydrogen is sometimes used for filling balloons; and liquid hydrogen, for producing extremely low temperatures.

hydrogen chloride. *Chem.* Hydrochloric acid; — so called esp. when in a non-ionized state.

hydrogen dioxide. *Chem.* An unstable compound, H_2O_2, containing relatively twice as much oxygen as does water. It occurs in minute quantities in the air, and also in rain and snow. An aqueous solution of it is obtained by the action of dilute acids on barium dioxide. When rendered anhydrous by concentration, it is a colorless sirupy liquid, having a bitter metallic taste, and causing blisters on the skin. In the form of solutions of various strengths, hydrogen dioxide is largely used as an oxidizing and bleaching agent, owing to its ready decomposition into oxygen and water. In medicine it is used as an antiseptic.

Nich'ol-son's **hy-dro'me-ter** (nĭk'ŭl-sŭnz) is of this kind, and has a submerged pan, so that the specific gravities of solids may be determined by weighing them in water and in air. Hydrometers more generally used have their stems graduated so as to indicate either specific gravities directly, or percentages of some constituent, or degrees on some arbitrary scale convertible by a table into specific gravities. Extra weights are sometimes used to adapt the scale to liquids of different densities. Hydrometers designed for special uses are known as the *alcoholometer, lactometer, wit-nometer,* etc. Those with arbitrary scales are usually known by their inventor's name, as the hydrometers of *Baumé, Gay-Lussac, Twaddell,* etc.

Hypnosis is a state resembling normal sleep in many particulars, differing from it esp. in a greater rapidity of pulse and respiration; in a tendency to general anæsthesia; in a marked susceptibility to vasomotor changes, as in the functioning of organs; and in an extreme suggestibility, rendering the person in the hypnotic state amenable not only to suggestions affecting volitional activities, but to such vasomotor changes as the raising of blisters or such functionings as the induction of lactation. Suggestions made to a hypnotized person to be acted upon during waking hours are called **posthypnotic suggestions.** Normally the person awakened from hypnosis does not remember what has occurred during the sleep, although this memory may be brought about by posthypnotic suggestion. Hypnosis is induced either physiologically (as by repeated stimulation of reflexes) or by suggestion, ordinarily operative only upon a willing patient. Self-suggestion is capable of producing **self-hypnotism,** or **autohypnotism.** There are degrees of hypnosis which have been characterized as **lethargic, cataleptic,** and **somnambulistic, hypnosis,** and again simply as light and heavy hypnotic sleep, with corresponding variation in suggestibility.

MECHANICAL HYSTERESIS. **b** In a magnetic material, as iron, a lagging in the values of resulting magnetization (denoted by *B*) due to a changing magnetizing force (denoted by *H*). When *H* falls to zero, there remains the magnetization *O* 3, called **residual magnetism.** To reduce *B* to zero, a negative value of *H* equal to *O* 4, called **coercive force,** is required. The area of the loop equals the **hysteretic loss,** a loss of energy due to molecular change manifest in heat. I

I (ī). **1.** The ninth letter and third vowel of the English alphabet. The character comes from the Phœnician, through the Greek and the Latin, being perh. ultimately of Egyptian origin. See ALPHABET, *Illust.* Its original value when long was practically the same as that of the Italian I, or modern English "long" *e* as in *mete,* and this value was retained in English until the early modern period, "short" ĭ, as in *sit,* being the same as at present. In modern English I has two principal vowel sounds: the "long" sound, as in *pīne, īce;* and the "short" sound, as in *pĭn.* It has also three other sounds: **a** That of *u* in *urn,* as in *thirst.* **b** That of *e* in *mete* (in words of foreign origin), as in *machine, pique, régime.* **c** That of consonant *y* (in many words in which it precedes another vowel), as in *bunion, million, filial,* etc. It enters into several digraphs, as in *fail, field, seize, feign, friend;* and with *o* often forms a proper diphthong, as in *oil, join, coin.* See *Guide to Pron.,* §§ 178–187. Etymologically I is most closely related to *e, y, j, g;* as in *dint, dent;* beverage, L. *bibere;* E. *kin,* AS. *cynn;* E. *thin,* AS. *pynne;* E. *dominion, donjon, dungeon.* The dot over the small *i* is comparatively recent, the letter at first being written without distinguishing mark. As early as the 11th century it was distinguished by an accent when doubled or written with *u;* thus, *íí, úí, íu,* the accent (which gradually changed into a dot) becoming universal when the invention of printing made it inconvenient to retain both forms of the letter. The sounds of I and J were formerly represented by the same character (I, i), and even after the introduction of the differentiated form J (see *j*), words containing these letters were classed together, in dictionaries, etc., down to the 19th century.

2. As a *symbol* [no period], used for or to denote or indicate: **a** The ninth in a series; ninth in order or class; sometimes, the numeral 9; as, Company *I.* **b** [*cap.*] *Chem.* Iodine. **c** *Physics.* (1) [*cap.*] Intensity of magnetization. (2) Current density; — more commonly represented by *C.* **d** [*cap.*] *Logic.* The particular affirmative proposition (some A is B). **e** [*l. c.*] *Math.* (1) The imaginary quantity $\sqrt{-1}$. (2) One of three mutually perpendicular unit vectors, the other two being *j* and *k.* **f** [*cap.*] *Mech.* Moment of inertia. **g** [*l. c.*] *Astron.* The inclination of an orbit to the ecliptic.

3. As a *numeral,* I stands for 1. It was originally a single stroke, not the letter I. II stands for 2, III for 3 and IIII sometimes, instead of IV, for 4. When prefixed, I denotes that 1 is to be subtracted; thus, IV means 4.

4. As an *abbreviation:* **a** In the form **I.:** Various proper names, as Isaac, Isabel, etc.; Idaho; Imperator (L., Emperor); Imperatrix (L., Empress). **b** In the form **i.** or **I.:** id (L., that); [often *ital.*] inactive, as *i*-mannite (*Chem.*); incisor (in dental formulæ); island.

I, *or* **i** (ī), *n.; pl.* I's or IS (īz). The letter I, i, or its sound.

I, *a.* Having a shape or a cross section resembling the letter I; as, I bar or I-bar, I beam or I-beam, I girder, I iron, I rail, etc.

I bar, a rolled iron or steel bar of I section used in constructional work. It is smaller in sectional area than the I beam. Called also **I iron** —**I beam,** a rolled iron or steel beam, or a cast steel beam, of I section; also, a built-up beam of I section. It is largely used in structural ironwork, as in steel-framed buildings. Called also **I girder.** See GIRDER, *Illust.*

2. Hath phantasied to himself, in *idea*, this magnetic mistress. *B Jonson*

5. Broadly, any object of the mind existing in apprehension, conception, or thought, a notion, thought, or mental impression.

Whatsoever the mind perceives in itself, or as the immediate object of perception, thought, or understanding, that I call *idea*. *Locke.*

When Locke treated sensations as *ideas*, or presentations, as we should now say, and defined these as "the objects of the understanding when a man thinks," he was really nearer to the truth than Kant was with his artificial distinction of matter and form *James Ward.*

Our *idea* of an orange really consists of the simple *ideas* of a certain color, a certain form, a certain taste and smell, etc., because we can, by interrogating our consciousness, perceive all these elements in the *idea* *J. S. Mill.*

Existence of *ideas* is subsequent to that of percepts, and even implies some complexity of perceptual cognition. *G. F. Stout.*

Ideas and impressions, as I have tried to show above, are not found lying apart as words lie on a page, although, by a reflective abstraction, we can regard them as so lying apart, and when thus regarded they form the world of meanings or of objective references — the identities symbolized by logical *ideas*. *B. Bosanquet.*

6. A general notion; an indefinite conception.

Alice had not the slightest *idea* what latitude was.
L Carroll (C. L. Dodgson).

7. A belief, opinion, or doctrine; also, a supposition or impression.

8. *Music.* A theme, phrase, or figure, as first conceived or sketched.

9. *Idea* as used to express Plato's ἰδέα is the most celebrated word in philosophy. Plato (see PLATONISM) uses it in its ordinary sense technically for species or class name, but finds by reflecting upon it that its truth or essence — its primordial meaning — is self-activity as we see it manifested in life and mind — plants, animals, and mankind. In the tenth book of the Laws he discusses ten kinds of motion, reducing them to two kinds: (1) movement through another and (2) movement through self. The latter is to him the true origin of all existence and all change. Aristotle arrives at the same thought and names it οὐσία (see ESSENCE and SUBSTANCE), but retains *idea* (Gr. εἶδος) for species, using entelechy (which see) for the deeper meaning of "self-active cause of life," probably because the word *idea* lends itself too readily to the meaning of "mental picture," which is a very different affair. For the meaning given by Hegel to the German word *Idee*, see HEGELIANISM. Hegel deliberates Plato's use of the word by adopting it to express the highest thought of his Logic and to signify not only Aristotle's εἶδος, or form-giving cause, but also to signify self-active creator revealing himself in perfect objective existence as nature and man and in the spiritual kingdom as an eternal procession from them. *W. T. Harris.*

10. **a** *Kantianism.* A transcendental conception of the reason, such as the *idea* of God. **b** *Hegelianism.* The final category of the Hegelian dialectic; the realized ideal, energy in its supreme manifestation; also, the Absolute Idea, or the Absolute. See ABSOLUTE, *a.*, 4 **b**.

11. *Humean Philosophy.* A mental structure or content which is a less vivid copy of some original sensation, emotion, or volition.

All the perceptions of the human mind resolve themselves into two distinct kinds, which I call impressions and *ideas*. The difference betwixt these consists in the degrees of force and liveliness with which they strike upon the mind and make their way into it, or in their first appearance in consciousness. Those perceptions which enter with most force and violence, we may name impressions; and, under this name, I comprehend all our sensations, passions, and emotions, as they make their first appearance in the soul. By *ideas*, I mean the faint images of these in thinking; such as, for instance, are all the perceptions excited by the present discourse, excepting only those which arise from the sight and touch, and excepting the immediate pleasure or uneasiness it may occasion. *Hume.*

☞ The pronunciation ī'dē-*ă* is a common provincialism throughout the southern United States.

Syn. — Opinion, fancy, conception. — IDEA, NOTION, IMPRESSION are here compared in their more popular and colloquial uses; for technical distinctions, see defs. IDEA is loosely used for any vague conception, supposition, or fancy; it is often employed to express surprise or astonishment, as at something ridiculous or preposterous; it sometimes denotes a good or practical plan, solution, or suggestion; as, "I had no *idea* that the law had been so great a slavery" (*Jane Austen*); "Mr. Elton in love with me! What an *idea!*" (*id.*); the *idea!* "A very clever point that. . . . You are really full of *ideas*" (*Bernard Shaw*); a brilliant *idea!* NOTION often adds to the implication of vagueness the suggestion of caprice or whim, or of half-formed or tentative purpose or intention; as, "I had no *notion* that he liked me so very much" (*Jane Austen*); "Very odd! but one never does form a just *idea* of anybody beforehand. One takes up a *notion*, and runs away with it" (*id.*); "modest, sober, cured of all her *notions* hyperbolical" (*Cowper*); "The boy might get a *notion* into him" (*Tennyson*). IMPRESSION, as here compared (see IMPRESS), commonly suggests a vague or indistinct recollection or remembrance; as, I have an *impression* that I have seen him before. See OPINION; cf. BELIEF.

i-de'aed, i-de'a'd (ī-dē'ăd), *a.* Having (such) an idea or (such or so many) ideas.

i-de'al (ī-dē'ăl), *a.* [L. *idealis*: cf. F. *idéal*.] **1.** Existing as a patterning or archetypal idea; specif., of or pertaining to Platonic ideas.

2. Of or pertaining to an ideal or to perfection of kind; existing as a perfect exemplar; embodying or symbolizing an ideal; as, *ideal* beauty; an *ideal* moral character.

There will always be a wide interval between practical and *ideal* excellence *Rambler.*

3. Existing as a mere mental image; existing in fancy or imagination only; visionary; unreal.

4. Pertaining to, or of the nature of, mental images, ideas, or conceptions; ideational; conceptual; also, embodying or symbolizing an idea.

Yet, in the specific phraseology of the schools, the whole mental being, so far as it consists of ideas, was called *ideal*. *Encken (Phelps).*

5. Of or pert. to idealism; idealistic in character or nature.

Syn. — Intellectual, mental; visionary, fanciful, imaginary, unreal; impracticable, utopian.

ideal chord, *Math.*, the intercept CC' between a pair of points, C and C', conjugate as to a conic, on a line not intersecting the conic in real points, the intercept being bisected by the center of involution on the line. *Poncelet.* — **i. gas.** *Physics.* = PERFECT GAS. — **i. numbers,** *Math.*, feigned numbers not belonging actually to any particular system of complex numbers considered. They were introduced by Kummer as factors of complex numbers having no factors otherwise, and found necessary to the unique factorizing quality of Gaussian complex integers. Ideal numbers exist only in products (of themselves) forming actual numbers, and may be likened to (hypothetical) *chemical radicals*, and actual numbers to *chemical elements*. In case of the 23d roots of 1, where ideal numbers first appear necessary, if r, r' be the roots of $x^2 + x + 6 = 0$, so that $r + r' + 1 = 0$ and $rr' = 6$, then 2, 3, etc., may be factored into ideal prime factors thus: $2 = \sqrt[3]{1-r}\cdot\sqrt[3]{1-r'}$, $3 = \sqrt[3]{1-2r}\cdot\sqrt[3]{1-2r'}$, etc., and in general every complex ideal number may be represented as some root of an actual number. — **i. par.** See PAR, *n.*, 1. — **i. prime,** *Math.*, an ideal number that becomes actual when multiplied by either of the ideal factors of 2.

i-de'al (ī-dē'ăl), *n.* **1.** A standard of perfection, beauty, or moral or physical excellence; a perfect type, whether a reality or a conception only; as, a perfect circle is an *ideal* impossible to construct; the Phidian Zeus at Olympia was a Greek *ideal* of divinity.

The *ideal* is to be attained by selecting and assembling in one whole the beauties and perfections which are usually seen in different individuals, excluding everything defective or unseemly, so as to form a type or model of the species. *Fleming*

2. *Math.* An assemblage of integers belonging to a corpus K and determined thus: Every sum and every difference of any two elements e' and e'' is also an element e; any product of an element e by an integer k of K, is also an element.

Syn. — See PATTERN.

i-de'al-ism (-Iz'm), *n* [Cf. F. *idéalisme*.] **1.** *Philos.* **a** Any theory which affirms that the universe is an embodiment of mind or that reality is essentially psychical; — called **metaphysical idealism.** **b** Any theory which identifies reality with perceptibility or denies the possibility of knowing aught save psychical reality; — called **epistemological idealism.** **Metaphysical idealisms** are of two main types, that which merely affirms the dominance of the ideal element in reality (as Aristotelianism, Augustinism, Platonism), and that which asserts that the intrinsic nature and essence of reality is consciousness or reason (as Hegelianism; see ABSOLUTE, ABSOLUTE EGO). **Epistemological idealisms** proceed from the affirmation that the mental life alone is knowable, either to a dogmatic dualism (as Cartesianism, Lockianism) (which in metaphysics results in realism), or to a subjective idealism in metaphysics (as Berkeleianism), or to solipsism or skepticism (as Humism). Kant termed his own system, with reference to the transcendental forms of experience, **transcendental idealism**; with reference to his method and point of view, **critical idealism** (see TRANSCENDENTALISM). **Subjective idealism** has been applied to the Fichtean doctrine of the absolute Ego as well as to the Berkeleian view; **objective idealism** designates the view of F. W. J. von Schelling (1775–1854) that nature is visible intelligence and intelligence invisible nature; **absolute idealism** is a name for Hegel's philosophy of the absolute mind or reason.

There are three leading forms of monism, viz., materialism, *idealism*, — or, as I should prefer to say, spiritualism, — and the neutral or agnostic monism now in vogue among scientific men. *James Ward*

In its "epistemological" sense *idealism* involves a theory of the nature of our human knowledge; and various decidedly different theories are called by this name in view of one common feature, namely, the stress that they lay upon the "subjectivity" of a larger or smaller portion of what pretends to be our knowledge of things *Josiah Royce.*

2. The practice of forming ideals or of living under their influence; the tendency to idealize; also, that which is idealized; an ideal representation or experience.

3. In literature and art, the theory or practice which values ideal or subjective types or aspects of beauty more than formal or sensible qualities, or that which affirms the preëminent value of imagination as compared with faithful copying of nature; — opposed to *realism*. In critical discussion *idealism* is generally thought of as laying stress on imagination as the shaping or selective faculty by which the confusion and multiplicity of detail in nature and human life is ordered by the artist according to a preconceived type, or moral or æsthetic ideal. The product of idealistic art thus differs from that of realistic art more or less as a painted portrait differs from a photograph. As variously emphasized, its operation may at one extreme amount to a license in manipulating facts and a straining of likelihood in the interest of the ideal, while at the other it may differ from artistic realism only in further selection and heightening of the pertinent in fact and detail. Cf. REALISM.

i-de'al-ist, *n.* [Cf. F. *idéaliste*.] **1.** An adherent of a doctrine of idealism.

3. Expressing or effecting identity. *Chiefly Math.*

Syn. — IDENTICAL, SAME, EQUIVALENT, EQUAL, TANTAMOUNT. IDENTICAL is the strictest term for entire and absolute agreement or negation of difference; as, No two leaves are *identical*; I found it at the *identical* spot where I left it; "Philammon was quite shrewd enough to see that assertion was not *identical* with proof" (*Kingsley*). SAME (which may be exactly synonymous with *identical*) is often used more loosely, either in the sense of that which itself does not change, or of that which is of like sort, character, or quality with something else; as, "Here's the twin brother of thy letter . . . — Why, this is the very *same*; the very hand, the very words" (*Shak.*); "He [Marlborough] could see a hero perish or a sparrow fall, with the *same* amount of sympathy for either" (*Thackeray*); "Nothing can be as it has been before; better, so call it, only not the *same*" (*R. Browning*); the twins were dressed alike, even to the *same* shoes. Things are EQUAL which are the same, esp. in number, amount, magnitude, value, and the like; they are EQUIVALENT when they amount to the same thing (particularly when set off against each other), esp. in worth, force, significance, or import; as, *equal* height, *equal* speed; *equal* shares, some in cash, some in real estate of *equivalent* value; the British pound is roughly *equivalent* to five dollars; "If to keep silence is not to lie, yet silence is, after all, *equivalent* to a negation" (*Thackeray*). TANTAMOUNT is commonly applied to other than material things; as, "Such a movement . . . would be *tantamount* to a confession of failure" (*Trollope*); "The government, against which a claim of liberty is *tantamount* to high treason, is a government to which submission is *equivalent* to slavery" (*Burke*). Syn. — Blockhead, dolt, dunce, dullard, oaf, booby. — IDIOT, IMBECILE, FOOL, SIMPLETON are here compared esp. in their connotations; for technical distinctions, see defs. IDIOT (a learned word become popular) implies absence, commonly congenital, of intellectual or reasoning powers; it is often less strictly used to characterize one who is felt to have acted with utter stupidity; IMBECILE (less common as a popular term) implies great mental feebleness or (in its looser derogatory sense) entire fatuity; FOOL, the more vigorous word, is wholly popular, and frequently suggests lack of sense or wisdom rather than of brains; from its Biblical use, it still connotes, in elevated style, grave, pitying, or scathing condemnation; in colloquial usage, as a term of contempt, it is strongly offensive; SIMPLETON (also wholly popular) implies silliness or (sometimes) unsophisticatedness, it is often used lightly as a term of indulgent contempt; as, "He said you were . . . a senseless, driveling *idiot*" (*Wycherly*); "What an *idiot* am I, to wait here for a fellow who probably takes a delight in mortifying me" (*Goldsmith*); "custom's *idiot* sway" (*Cowper*); cf. an *idiotic* grin; "The petty passions, the *imbecile* desires, . . . daily moving her contempt" (*G. Eliot*); "She 's a *fool* to stay behind her father" (*Shak.*); "*Fools* rush in where angels fear to tread" (*Pope*); "They look upon persons employing their time in making verses . . . as *simpletons* easily to be deceived" (*V. Knox*); poor, innocent little *simpleton!* "The Great *simpleton!*" . . . of Mr Newman, and the 'Thou *fool!*' of the Bible, are something alike; but 'Thou *fool!*' is very grand, and 'Great *simpleton!*' is an atrocity. So too Shakespeare's 'Poor venomous *fool*, be angry and dispatch!' is in the grand style" (*M. Arnold*). See FOOLISH, WEAK.

i'dyl, i'dyll (ī'dĭl), *n.* [L. *idyllium*, Gr. εἰδύλλιον, fr. εἶδος form, lit., a little form or image; cf. F. *idylle*. See IDOL.] **1.** Orig., a little picture in verse, or kind of short descriptive poem, as one dealing with pastoral or rural life; as, the *idyls* of Theocritus; also, by extension, any artless and easily flowing description, either in poetry or prose, of simple, rustic life, of pastoral scenes, and the like.

His [Goldsmith's] lovely *idyl* of the Vicar's home. *F. Harrison.*

The *idyll* must be simple, calm, more concerned with situation than with action. As a good example of this sort of poetry we should not instance the obvious "Idylls of the King" by Tennyson, which are more full of action than the title warrants, and belong to the legendary epic; but we should instance "The Cotter's Saturday Night" of Burns as an excellent short *idyll*. *F. B. Gummere.*

2. An incident, episode, series of events, or the like, of such a character as to be a fit subject for an idyl.

OHG. *iba* doubt, condition, Icel. *if, ef, ifi, efi*), and therefore orig. meaning, on condition that.] **1.** In case that; granting, allowing, or supposing that; — introducing a condition or supposition; sometimes, as for rhetorical effect, a concession; as, *if* they are rich, they are not snobbish. Conditional clauses introduced by *if* may be classified as expressing: (1) What the speaker assumes or admits as actual fact. Here both condition and conclusion typically have the indicative, as in, *if* he sees it, he will tell. (2) What the speaker regards as contingent, and withholds indorsement from as fact. Here the condition typically has the present subjunctive; the conclusion, the indicative; as in, *if* he see it, he can tell. (3) What the speaker regards as contrary to fact. Here the condition typically has the pluperfect, or the preterit subjunctive; the conclusion, the "conditional" mood with *should* or *would*; as, *if* he were to see it, he would tell us. The verb after *if* is often omitted where the context readily suggests it; as in, that is important, *if* true. *If* is itself often omitted from a conditional clause, which then usually inverts the order of subject and verb; as in, *had he* seen us, he would have come. A conditional clause with *if* sometimes stands alone as a rhetorical exclamation; as, *if* the rascal has n't come again! "*If* thou be the Son of God, command that these stones be made bread." *Matt.* iv. 3.

2. Whether; — in dependent or indirect questions. This use of *if* dates back to Anglo-Saxon, but is now largely replaced by *whether*.

Uncertain *if* by augury or chance. *Dryden*
She doubts *if* two and two make four. *Prior.*

Also he sent forth a dove from him, to see *if* the waters were abated from off the face of the ground. *Gen.* viii 8.

Syn. — IF, PROVIDED. IF implies a condition; PROVIDED always adds the implication of a stipulation or proviso; as, "*If* this counsel . . . be of men, it will come to naught" (*Acts* v. 38); "It is not hard to know God, *provided* one will not force one's self to define him" (*M. Arnold*).

They are probably of Malay-Negrito stock, since they share with the Negritos such features as dark skin, flat noses, thick lips, etc., and such cultural traits as the use of the bow, a non-Malayan weapon.

I use this term [*Igorot*] here to designate the great stock of primitive Malayan tribes occupying the Cordillera Central of northern Luzon. By differences more or less pronounced in their dialects, as well as interesting but unessential variations in custom, the *Igorot* are divided into the following branches or tribes: Ibaloi, Kankanay, Isinay, Silipan, Mayoyao, Bummayon, Kalinga, Gaddang, Dadayag, Ginaan, Ipokao, and Apoyao.

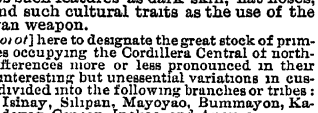
I-graine' (ē-grān'; -grā'nē), *n.* [Cf. LL. *Igerna*, OF. *Igerne*, *Iguerne*.] In Arthurian legend, the beautiful wife of Gorlois, Duke of Tintagil, or Tintagel, in Cornwall, and mother of the illustrious Arthur, by Uther, King of Britain. Merlin, the magician, changed Uther into the semblance of Gorlois, and thus enabled him to deceive the duke's wife, for whom he had conceived a violent passion. Gorlois was slain in a sortie three hours before this event, and thirteen days later King Uther married Igraine. Tennyson, who spells the name *Ygerne*, represents Uther as besieging her castle, after her husband had been slain in war with him, and forcing her to marry him.

i-gua'na (ĭ-gwä'nä), *n.* [Sp., fr. native name in Haiti. Cf. GUANA.] **1.** Any of several large tropical American lizards constituting the genera *Iguana* and *Metopoceros*. The best known is *I. tuberculata* of South and Central America and parts of the West Indies, which attains a length of five or six feet. It is greenish and blackish in color, more or less speckled and barred. The neck and back bear a high serrated crest, and there is a large gular sac (which is not dilatable) having a serrated margin. In habits it is inoffensive and entirely herbivorous, and it is esteemed as food. It is partly arboreal and frequents the vicinity of water. The horned iguana (*M. cornutus*) of Haiti has three hornlike scales on the head.



Iguana (*I. tuberculata*).

2. a In popular usage, any of various large lizards; esp., in Australia, the lace lizard; in Tasmania, *Tiliqua scincoides*. b In New Zealand, the tuatara.

I-guan'i-dæ (ĭ-gwän'ĭ-dē; -gwa'nĭ-dē), *n. pl.* [NL.] *Zoöl.* A family of lizards of which *Iguana* is the typical genus. It is distinguished from the Agamidæ by the pleurodont dentition, and is chiefly American, but represented in Madagascar by two species and in the Fiji Islands by one species. Many of the small inoffensive lizards of the United States, as the fence lizards and horned toads, belong to this family. — **i-gua'ni-an** (ĭ-gwā'nĭ-ăn, ĭ-gwän'ĭ-), *a. & n.* — **i-gua'nid** (-gwa'nĭd; -gwän'ĭd), **i-gua'ni-form** (-fôrm), *a.*

I-guan'o-don (ĭ-gwän'ō-dŏn; ĭ-gwä'nō-dŏn), *n.* [NL.; *iguana* + Gr. ὀδούς, ὀδόντος, a tooth.] *Paleon.* A genus of extinct gigantic herbivorous dinosaurs of the group Ornithopoda, known from the Upper Jurassic and early Cretaceous of Belgium and England. The head was compressed, and the jaws were probably provided with a horny covering in front like that of a turtle, but farther back there were numerous spatulate, serrated teeth. The fore limbs were comparatively small, the large three-toed hind limbs being chiefly used in walking. The tail was large and heavy and doubtless assisted in standing upright. There appear to have been two species: *I. bernissartensis*, which became 30 feet long; and *I. mantelli*, considerably smaller. The genus is type of a family, **I-guan'o-don'ti-dæ** (ĭ-gwän'ō-dŏn'tĭ-dē; ĭ-gwä'nō-). — **i-guan'o-dont** (-dŏnt), *a. & n.*

XP, ICHTHUS, TETRAGRAMMATON.

Syn. — ILLUMINATE, ILLUMINE, ILLUME, ENLIGHTEN, LIGHTEN, LIGHT. TO ILLUMINATE, both lit. and fig., is to make (esp. an object) light, clear, or luminous, or to throw (esp. bright) light upon it; ILLUMINE and ILLUME are poetical; as, "As he then looked behind him, he could see the earth no more, but the isles all bright and *illuminate* with a mild and delicate fire" (*Holland*); "Here was a man . . . who could *illuminate* principle with the widest knowledge" (*G. Eliot*); "What in me is dark *illumine*" (*Milton*); "When yond same star . . . had made his course to *illume* that part of heaven where now it burns" (*Shak.*). ENLIGHTEN, in the sense of illuminating or making light, is poetical or archaic; as, "shadow and sunshine . . . darkening and *enlightening*" (*Cowper*); "The quick smile had *enlightened* [her face]" (*Stevenson*). In modern usage, to *enlighten* is to communicate intellectual light, esp. by supplying knowledge or information; in the form *enlightened*, the word carries the implication of freedom from prejudice, superstition, or intolerance; as, "He had been in love with Emma, and jealous of Frank Churchill, from about the same period, one sentiment having probably *enlightened* him as to the other" (*Jane Austen*): "What, still there! in this *enlightened* age too, since you [ghosts] have been proved not to exist!" (*Shelley*). LIGHTEN is archaic or poetic, whether in the sense of *enlighten* (as, "Now the Lord *lighten* thee! thou art a great fool," *Shak.*) or *light* up (as, "*lighten* our darkness," *Bk. of Com. Prayer*); cf. "to *light* the darkness" (*Campbell*). To LIGHT, the word in common use, is to give light; it is rarely fig., except with the implication of guidance; it may also (alone among the words here compared) mean to ignite or to set burning; as, "Seas roll to waft me, suns to *light* me rise" (*Pope*); "a glimmering land, *lit* with a low large moon" (*Tennyson*); "All our yesterdays have *lighted* fools the way to dusty death" (*Shak.*); well-*lighted* streets; "Neither do men *light* a candle, and put it under a bushel" (*Matt.* v. 15). im-ag'i-na'tion (-nā'shŭn), *n.* [ME. *imaginacioun*, F. *imagination*, fr. L. *imaginatio*. See IMAGINE.] **1.** That power or function of the mind whereby we have ideal experience, primarily, the power or process of having mental images; broadly, the power or process of forming ideal constructions from images, concepts, and feelings, with relative freedom from objective restraint. Apparently *imagination* first designated the faculty of having mental images, esp. visual images, the faculty, according to Trevisa (1398), whereby "the soul beholdeth the likeness of things that be absent." This meaning still prevails in psychology under the name **reproductive imagination.** The broader meaning, already developed in Chaucer, starts with the notion of mental imaging of things suggested but not previously experienced, and thence expands, first to fantastic representation, or fancy, and later to the idea of mental creation and poetic idealization, — the **productive, constructive,** or **creative, imagination** of the psychologist. The notion of mental imagery is retained more or less throughout this development, but becomes less and less essential and practically disappears in that usage which terms a scientific hypothesis a work of the **rational imagination.** Cf. FANTASY, 2.

Men may dye of *imaginacioun*,
So depe may impression be take. *Chaucer.*

The forms of things unknown, the poet's pen
Turns them to shapes, and gives to airy nothing

3. A process or content of thought; opinion. *Obs. or R.*

5. *Zoöl.* Act or process of changing to an imago.

Syn. — IMAGINATION, FANCY are here compared in their application to artistic (esp. poetical) composition; for psychological distinctions, see defs. In earlier usage, *imagination* and *fancy* were employed without distinction, *fancy* esp. having frequently little or nothing of its modern connotation; as, "the poet . . . of *imagination* all compact" (*Shak.*); "sweetest Shakespeare, *fancy's* child" (*Milton*); "*imagination* or *fancy* (which I shall use promiscuously)" (*Spectator*). Since Wordsworth (see quotation below) the terms have been commonly discriminated: IMAGINATION, the word of higher import, connotes esp. the exercise of plastic or creative power; FANCY (see FANCIFUL) suggests the play of associations more remote, arbitrary, or capricious; as, "The *imagination*, or shaping or modifying power; the *fancy*, or the aggregative and associative power" (*Coleridge*); "The distinction between *fancy* and *imagination* is, in brief, that *fancy* deals with the superficial resemblances, and *imagination* with the deeper truths that underlie them" (*Leslie Stephen*). See FANCY, *imagination*.

Fancy does not require that the materials which she makes use of should be susceptible of change in their constitution from her touch; and, where they admit of modification, it is enough for her purpose if it be slight, limited, and evanescent. Directly the reverse of these are the desires and demands of the *Imagination*. She recoils from everything but the plastic, the pliant, and the indefinite. . . . When the *Imagination* frames a comparison . . . the resemblance depend[s] less upon outline of form and feature than upon expression and effect; less upon casual and outstanding than upon inherent and internal properties; moreover, the images invariably modify each other The law under which the processes of *Fancy* are carried on is as capricious as the accidents of things: . . . but the *Imagination* is conscious of an indestructible dominion. *Wordsworth*

You may conceive the difference in kind between the *fancy* and the *imagination* in this way, that if the check of the senses and the reason were withdrawn, the first would become delirium, and the last mania. The *fancy* brings together images which have no connection natural or moral, but are yoked together by the poet by means of some accidental coincidence; as in the well-known passage in Hudibras:—

"The sun had long since in the lap
Of Thetis taken out his nap,
And like a lobster boiled, the morn
From black to red began to turn."

The *imagination* modifies images, and gives unity to variety; it sees all things in one; . . . as after the magnificent approach of the Messiah to battle, the poet, by one touch from himself — "far off their coming shone!" — makes the whole one image. *Coleridge.*

(2) A calling to account for some high crime or offense before a competent tribunal; arraignment, esp. of a public officer for misconduct while in office. In England it is the privilege or right of the House of Commons to impeach, and the right of the House of Lords to try and determine impeachment; but, owing to the adoption of the principle of parliamentary responsibility of ministers, impeachments have become practically obsolete. In the United States, however, impeachment has been established by the Federal Constitution and by the constitutions of most of the States. It is the right of the House of Representatives to impeach; and of the Senate to try and determine impeachments (*U. S. Const.* Art. I. sec. 2; Art. II. sec. 4). Similarly, in most of the States the lower house impeaches, and the Senate, or upper house, tries the impeachment. **d** A calling in question or discrediting as to purity of motives, rectitude of conduct, credibility, etc.; dishonor, challenge; reproach; as, an *impeachment* of a witness.

Eliot*); "A heap of arguments to be blown away by the bloated whiffs of some rhetorical *charlatan*, tricked out in a multiplicity of ribbons for the occasion" (*Landor*).

feeble conventions and formality. From 1870 to 1890 Sisley, Pissaro, Degas, Raffaelli, Besnard, were prominently affiliated with the school. The general idea underlying all their practice was the necessity of rendering the immediate sense impression of the artist, apart from any analysis or any study of the characteristics in the objects represented, other than their external appearance. On this account the study of colored light became the main object and aim of the landscape painters, who were in the majority, and curious experiments were made in the way of using only pure colors laid side by side, the eye being required to blend their effect and so obtain, as it was thought, a more brilliant gradation than could be got by mixing the pigments. On this account they were called out-of-door workers (plein-aristes), and light students (luminists). When such painters as Bastien-Ledents and Whistler were included, it appeared that the term *impressionism* had lost its true significance.

4. That gain or recurrent benefit (usually measured in money) which proceeds from labor, business, or property; commercial revenue or receipts of any kind, including wages or salaries, the proceeds of agriculture or commerce, the rent of houses, or the return on investments. The total receipts from any branch of business are known as the gross income. That portion of the receipts which remains after paying wages and for materials is known as net income, which is in turn subdivided into interest on the capital invested and profits over and above this interest, or *net income* in the narrowest sense.
5. In theoretical economics, the enjoyments made available for the community, whether in the form of goods or services, during a given period of time, usually a single year, as distinct from the amount of goods in existence at a particular moment. This use of the word *income* represents an attempt to apply to the public wealth of a nation the same sort of measure of prosperity which the preceding sense of the word *income* applies to the private wealth of an individual. It is, however, much harder to use successfully, because the income of an individual can be very accurately measured in money, while the income of a nation, and particularly its net income, often seems to elude all attempts at measurement.
Capital is constantly being converted into *income* and *income* into capital. But capital, under all times and conditions, is measured as a quantity, while *income* is more properly measured as a rate. Capital is a static conception independent of time; *income*, a dynamic conception involving the element of time.
A. T. Hadley.

2. A member of one of the native races of India (Hindustan) or of Farther India (Indo-China); specif., a civilized native of Hindu culture; a Hindu. The races of British India are classified by the ethnologists of the census, 1901, as: **Turko-Iranian**, on the northwest frontier; **Scytho-Dravidian**, mainly in the Bombay Presidency; **Indo-Aryan**, mainly in Kashmir, the Punjab, and the Rajputana Agency; **Aryo-Dravidian**, in the United Provinces and southern Ceylon; **Dravidian**, from the Central India Agency and Bengal south through the greater part of the peninsula and the northern half of Ceylon; **Mongolo-Dravidian**, throughout eastern Bengal; **Mongoloid**, in Nepal, Bhutan, Assam, and Burma. These races are complicated by every degree of intermixture, and represent every stage of culture from savage Gonds to the cultivated Hindus. In Farther India the population is more uniformly Mongoloid, but Malayan elements are found even to the north of the Malay Peninsula, where traces of Negrito blood also occur (see SAKAI). See names of nations and tribes in the table of INDO-CHINESE LANGUAGES; cf. MALAYO-POLYNESIAN LANGUAGES, and def. 4, below; also, see TURKO-IRANIAN, SCYTHO-DRAVIDIAN, etc.

5. A member of any of the aboriginal American stocks excepting the Eskimauan; an *American*, or *Red, Indian*. The American Indians are generally regarded either as an offshoot of the Mongolian race, or as a fusion of a primitive dolichocephalic European race with brachycephalic Asiatics. In any case, this fusion is of such antiquity as to have resulted in a distinct variety of man, *Homo Americanus*. The Indians, like the Mongolians, have long, lank, straight black hair of round section, sparse beard, and moderately dark skin, coppery to yellowish; they lack the characteristic Mongolian slant of the eye. In stature and the form of the nose they are more nearly of the Caucasian type; in head form they vary from moderate brachycephaly to moderate dolichocephaly. In their generally stoical, taciturn, and wary disposition, as in their arts and language, they represent a wholly autochthonous type. Although there are many differences, both physical and cultural, between various tribes, the only classification widely accepted is that based upon language. Some of the chief linguistic stocks are: In *North America*, Algonquian, Athapascan, Caddoan, Iroquoian, Keresan, Kiowan, Koluschan, Kulanapan, Mariposan, Muskhogean, Piman, Salishan, Shahaptian, Shoshonean, Siouan, Skittagetan, Tanoan, Timuquanan, Wakashan, Yuman, Zuñian; also, in *Mexico* and *Central America*, Mayan, or Huaxtecan, Nahuatlan, Opatan, Otomitlan; in *South America*, Araucan, Arawakan, Cariban, Guaranian, Guaycuran, Quichuan, Tupian, Tsonecan.

3. *Mach.* An instrument for automatically drawing a diagram (called the **indicator card** *or* **diagram**) which shows the pressure of the working fluid in an engine at every point of the stroke. In its typical form it consists of a small cylinder (*A* of illustration) communicating with one end of the engine cylinder and fitted loosely with a piston (*B*) which works against a spring (*C*) of known strength. This piston communicates its motion through a series of levers combining enlarging and straight-line mechanisms (*D*) to a pencil point (*E*) which is lightly pressed against a sheet of paper fastened around a drum (*F*) by clips (*G*). This drum (restrained by a spring) is rotated backward and forward by a string (*H*) which repeats on a reduced scale the motion of the piston. The pencil therefore traces out a closed curve which is the resultant of the motion of the indicator piston (representing the variations of cylinder pressure) and of that of the engine piston. Absolute pressures are determined by measuring from the atmospheric line (which see). From the indicator diagram the following may be observed or deduced: — (1) Admission, cut-off, release, compression, ratio of expansion, etc. (2) Wiredrawing in passages. (3) Back pressure. (4) Condensation, dryness (of steam), etc. (5) Indicated horse power (from net area of diagram). A typical indicator card for one end of a single-cylinder condensing engine is shown in the cut. Owing to the inertia of the moving parts, the ordinary indicator is unsuitable for high-speed engines, and special devices have therefore to be employed for these. See MANOGRAPH.

Other common indicators are phenol phthalein, methyl orange, potassium permanganate, etc. **6.** *Zool.* **a** [*cap.*] The typical genus of honey guides (see HONEY GUIDE). **b** [*l. c.*] A honey guide. **7.** *Mining.* One of a group of narrow pyritiferous seams the intersections of which with the auriferous quartz veins of the district are usually characterized by rich accumulations of gold. *Australia.*

Also, a specific year in the cycle; as, the third, seventh, or twelfth *indiction*. This mode of reckoning time is said to have been introduced by Constantine the Great, in connection with the exaction of tribute. Through the influence of the popes, it was extensively used in the ecclesiastical chronology of the Middle Ages. The number of indictions was reckoned at first from A. D. 312, September 1, but since the 12th century it has been reckoned from the birth of Christ. To find the indiction and year of the indiction by the first method, subtract 312 from the given year A. D., and divide by 15; by the second method, add 3 to the given year A. D., and then divide by 15. The quotient is the number of the current indiction; the remainder, the year of the indiction. **4.** *Eccl.* An observance proclaimed or ordained by authority, as a fast; also, the period of its observance. *Obs.*

INDITEMENT.] **1.** Act of indicting, or state of being indicted; esp., the legal process by which a bill of indictment is preferred to, and presented by, a grand jury. **2.** *Law.* The formal written statement charging one or more persons with an offense, as framed by the prosecuting authority of the state, and found by the grand jury. It is distinctively called a **bill of indictment** until it is found or ignored by the grand jury. It differs from an *information*, which rests only on presentation by the prosecuting authority, and properly from a *presentment*, which is an accusation originating with the grand jury. The word is sometimes loosely used, however, to include an information or presentment, or both, as in some British statutes, and in West Australia.

It has been held that the word *indictment* occurring in a particular statute did not include an ex-officio information. (Reg. *v.* Slater, 8 *Q. B. D.* 267.) In some acts, however, for instance, 14 and 15 Vict. c. 100, s. 30, *indictment* is defined as including information. And *indictment* includes inquisition. (2 *Hale*, 155; Withipole's Case, *Cro. Cas.* 134; Maxwell, *Interpr. of Stat.* p 456.) In all the Australian colonies . . . indictable offenses are prosecuted in the name of the Attorney General by a procedure variously known as information, presentment, or *indictment*, and chiefly differing from an *indictment* in being found by a law officer instead of by a grand jury. It seems clear that the words "on *indictment*" would extend to any such form of prosecution as this. *Quick & Garran.*

3. *Scots Law.* A process of bringing a person to trial for a crime at the instance of the Lord Advocate.

These languages are exceedingly ancient, Chinese being considered by some as related to Akkadian. They were once all agglutinative, as are still the Tibeto-Burman languages, but in the course of centuries monosyllabism has become characteristic of the majority of them. The disappearance of agglutinative prefixes has resulted in the tones (see TONE) which are a distinctive peculiarity of the group (see ISOLATING LANGUAGES). Some of the monosyllabic languages have begun again to enter the agglutinative stage, while Kachari "shows isolated signs of the commencement of that true inflection which is strange to most agglutinative languages" (*Census of India*, 1901).

In'do-Eu'ro-pe'an, *a.* Of or designating the Indo-European languages (see below), or pert. to the Indo-Europeans.
Indo-European languages, the most important linguistic family of the globe, comprising the chief languages of Europe together with the Indo-Iranian and other Asiatic tongues. The origin of these languages (called also *Indo-Germanic*, *Aryan*, and *Indo-Celtic*) is unknown, but the oldest records preserved (the Vedic hymns and the Homeric poems, both dating from about 1500 to 1000 B. C.) show them as fully inflected languages already widespread and widely differentiated. It is considered that the prehistoric inflected language, or *parent Aryan*, originated from an agglutinative parent language, by some supposed to be related to the Finno-Ugric languages. Within historic times the tendency of nearly all of the Indo-European tongues has been from the highly inflected toward the isolating type, English being the most advanced in this direction (see ARYAN, INFLECTIONAL LANGUAGES). Of the many classifications of these languages, the most satisfactory is considered to be that which distinguishes the *satem* from the *centum* speakers, these variants of the word for "hundred" indicating characteristic phonetic differences of the eastern and western divisions. The groups so formed are as follows:

In'do-ne'sian (ĭn'dŏ-nē'shăn; 277), *a.* [*Indo-* + Gr. νῆσος island.] Of or pertaining to Indonesia or the Indonesians.

In'do-ne'sian, *n.* A member of a race forming the chief pre-Malay population of the Malay Archipelago, and probably sprung from a mixture of Polynesian and Mongoloid immigrants. According to Keane, the autochthonous Negritos were largely expelled by the Caucasian Polynesians, themselves followed by Mongoloid peoples of Indo-Chinese affinities, from mixture with whom sprang the **Indonesian race**, including Dyaks, Battaks, etc.
The term *Indonesian*, introduced by Logan to designate the light-colored non-Malay inhabitants of the Eastern Archipelago, is now used as a convenient collective name for all the peoples of Malaysia and Polynesia who are neither Malay nor Papuans, but of Caucasic type. The true *Indonesians* are of medium stature (5 ft. 10 in.), muscular frame, rather oval features, high, open forehead, large straight or curved nose, large full eyes always horizontal and with no trace of the third lid, light brown complexion (cinnamon or ruddy brown), long black hair, not lank but often slightly curled or wavy, skull generally brachycephalous like that of the melanochroic European *A. H. Keane.*
The *Indonesians* [of the Philippines], with the tribal population of some 251,200, live almost exclusively on the great island of Mindanao They are not only physically superior to the Negritos, but to the peoples of the Malayan race as well, and are, as a rule, quite intelligent. *Rep Phil. Com.*, 1902.

He is often represented as riding an elephant and holding a thunderbolt.

Syn. — Lead, influence, move, instigate, incite, impel, urge; prevail on, win over, entice, allure. — INDUCE, PERSUADE agree in the idea of moving or influencing to a course of action, and are often interchangeable. But INDUCE more frequently implies an influencing of the reason or judgment (cf. *inducement*, under MOTIVE); PERSUADE often suggests rather an appeal to the feelings or desires, sometimes against one's judgment or conviction; as, "Its effect was to . . . *induce* the victim of a shadowy hope to remit all self-effort, while awaiting the realization of his dreams" (*Hawthorne*); "enough of sweetness in the sound to *induce* us to enter and sit still" (*Landor*); "He only can *persuade* mankind who believes that God has spoken to him. No one can give faith unless he has faith; the *persuaded persuade*" (*M. Arnold*); cf. in-duc'tance (ĭn-dŭk'tăns), *n. Elec.* **a** That property of an electric circuit by virtue of which a varying current induces an electromotive force in that circuit or in a neighboring circuit. **b** Specif., as a measure of self-induction or mutual induction, a quantity which, measured in henrys, is numerically equal to the electromotive force induced in a circuit by a current varying at the rate of one ampere per second. The induced electromotive force is consequently equal to the product of the inductance and the time rate of change of the inducing current. The inductance of a coil is proportional to the square of the number of turns and to the product of the cross section and permeability divided by the length of its magnetic circuit. In the absence of a magnetic core, *inductance* may be defined as the product of the number of turns in a circuit and the number of lines of force inclosed by it when carrying unit current. **c** A circuit possessing inductance (in sense **a** or **b**).

3. That which inducts; specif., an introduction or introductory scene, as to a play; preface; prelude. *Archæ.*

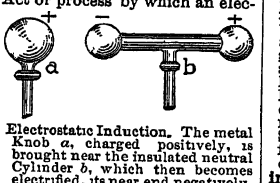
This is but an *induction:* I will draw
The curtains of the tragedy hereafter. *Massinger*

4. *Logic.* Act or process of reasoning from a part to a whole, from particulars to generals, or from the individual to the universal; also, the result or inference so reached. By Aristotle *induction*, or epagoge, was treated as a subordinate form of reasoning, consisting, when perfect, of a complete enumeration of all the particulars comprised under the inferred generalization; hence called *induction by simple enumeration*. The great advance over this view was the *inductive method*, or *philosophical induction*, of Bacon, which consists in the inferring that what has been observed or established in respect to a part, individual, or species, may, on the ground of analogy, be affirmed or received of the whole to which it belongs. Such inference ascends from the parts to the whole, and forms, from the general analogy of nature, or special presumptions in the case, conclusions which have greater or less degrees of force, and which may be strengthened or weakened by subsequent experience and experiment, but which, in the long run, by reason of repeated observations, will rectify themselves. This method is known also as *ampliative inference*. John Stuart Mill further elaborated the philosophy of induction, propounding as its basis the law of the uniformity of nature, and furnishing criteria for inference from particulars in his four methods, namely, of agreement, difference, residues, and concomitant variations. (See under METHOD.) Later logicians have been concerned with the more exact determination of the nature of the universal element which enables an inference from particular to particular, and with the significance of Mill's doctrine of nature's uniformity.

Induction is the process by which we conclude that what is true of certain individuals of a class, is true of the whole class, or that what is true at certain times will be true in similar circumstances at all times. *J. S Mill.*

5. *Math.* A process of demonstration in which the general validity of a law is inferred from its observed validity in particular cases, by proving that if the law holds in a certain case it must hold in the *next* case, and therefore in the *next*, and so endlessly. See MATHEMATICAL INDUCTION.

6. *Elec. & Magnetism.* Act or process by which an electrical conductor or a magnetizable body becomes itself electrified or magnetized in the presence, without necessarily actual contact, of an electrically charged body, a magnet, or a magnetic field produced by an electric current. In **electrostatic induction**, a body electrostatically charged induces in a neighboring conductor a like charge in the parts farthest from the charged body, and an unlike charge in the nearer parts, the repelled like charge being removed by connecting any part of the conductor momentarily with the earth while the bound unlike charge spreads over the whole surface of the conductor and remains there even when the inducing body is moved away or its charge neutralized, if the conductor is properly insulated. **Magnetic induction** occurs when a mass of iron, steel, or some other magnetizable substance becomes a magnet by being placed in a magnetic field, such induced magnetism being temporary in the case of soft iron when the latter is removed from the magnetic influence, and permanent in the case of steel. **Electromagnetic induction** is the production of currents by the cutting of a conductor by magnetic lines of forces produced either by a permanent magnet, or an electromagnet, or a current-carrying conductor. Changes in the magnetic field due to an electric current may induce currents in the circuit itself (**self-induction**) or in a neighboring circuit (**mutual induction**). Induced currents are produced whenever the inducing current starts, ceases, or changes direction or intensity, or whenever a current-carrying conductor is moved relatively to another conductor or conductors so as to cause its lines of force to cut the latter. The intensity of an induced current is proportional to the rate of cutting of lines of force, and its direction is always such as to oppose the motions which produce it. Mutual induction and self-induction are sometimes called **electrodynamic induction**.



Electrostatic Induction. The metal Knob *a*, charged positively, is brought near the insulated neutral Cylinder *b*, which then becomes electrified, its near end negatively, and its far end positively.

Syn. — See DEDUCTION.

induction balance. *Elec.* An extremely sensitive device consisting essentially of two primary and two secondary coils so wound that the induced currents in the secondaries neutralize each other, no sound being audible in a telephone receiver connected with them in series. The introduction of a small piece of conducting substance disturbs the balance and causes the telephone to sound.

induction bridge. An induction balance, arranged after the manner of a Wheatstone's bridge.

induction coil. *Elec.* An apparatus for transforming an ordinary battery current by induction into an alternating current of high potential; — called also *inductorium*, *Ruhmkorff's coil*, *spark coil*. It consists of a coil or helix of

Description of Illustration: The Battery *B* is connected with Binding Posts *b*. The hammer-break Interrupter *I* being in position to close the circuit, the current flows through the Primary Winding, thus magnetizing the laminated iron Core, which then attracts the Armature *A*, breaking the circuit at *D*. The Core then becomes demagnetized, permitting *A* to spring back to its original position and again close the circuit. The Condenser is in parallel with the break at *I*. The Terminals *T, T* of the Secondary Winding form the Spark Gap *G*.

stout insulated wire (the primary) surrounded by another coil of many turns of fine insulated wire (the secondary), and is provided also with a core built up of soft iron wire or laminæ, an interrupter, and, usually, a small condenser connected with the primary. When the interrupted current is passed through the primary coil the current induced in the secondary is capable of producing sparks when the terminals are separated. The effect of the condenser is to make the sparks longer and unidirectional.

induction generator. A machine built as an induction motor and driven above synchronous speed, thus acting as an alternating-current generator; — called also *asynchronous generator*. Below synchronism the machine takes in electrical energy and acts as an induction motor; at synchronism the power component of current becomes zero and changes sign, so that above synchronism the machine (driven for this purpose by mechanical power) gives out electrical energy as a generator Cf. INDUCTION MOTOR.

induction machine. *Elec.* **a** A machine for producing electricity by electrostatic induction, as the Holtz machine. **b** A machine with a stationary and a rotating coil acting inductively upon each other, as an induction motor or generator.

Syn. — Dull, passive, idle, lazy, indolent, supine, slothful, stupid, lethargic, apathetic, lifeless, dead. — INERT, INACTIVE, SLUGGISH, PHLEGMATIC, TORPID. One is INACTIVE who for any reason is not busy or active; the word may or may not imply disinclination to action; INERT always suggests inherent or habitual indisposition to activity; as, "A limb was broken . . . and on him fell, . . . [while] lying thus *inactive*, doubt and gloom" (*Tennyson*); "*inert* through plenty, . . . victims of luxurious ease" (*Cowper*); "an idle and *inactive* life" (*Pope*); "laziness and *inertness* of mind" (*Burke*); "Matter . . . is *inert* and stupid" (*Dr. H. More*). That is *inert* which is hard to stimulate or set in motion; that is SLUGGISH which is not only hard to rouse, but is also slow or heavy when in motion; as, "The *inert* were roused, and lively natures rapt away!" (*Wordsworth*); "To see how shadows shifted with the slow move of time — *sluggish* and weary" (*Keats*); a *sluggish* stream. PHLEGMATIC, applying only to persons or personal qualities, connotes constitutional heaviness or stolidity; as, "Fancy . . . [is] sharper in an excellent poet than it is likely it should be in a *phlegmatic*, heavy gownsman" (*Dryden*); "There are two Hollands in every Dutchman; there is the man of the polder, heavy, pale, *phlegmatic*, slow, patient himself and trying to the patience of others" (*Mrs. Humphry Ward*). TORPID (see LETHARGY) adds the implication of apathy or the sluggishness of that which is, as it were, benumbed; as, "This system of criticism sprang up in that *torpid* interval when poetry was not" (*Shelley*). "Mrs. Jamieson stood up, giving us each a *torpid* smile of welcome" (*Mrs. Gaskell*). See LANGUID, LIFELESS, SLOW, IDLE, PASSIVE.

Syn. — INEVITABLE, UNAVOIDABLE. INEVITABLE, the stronger term, applies esp. to that which, in the nature of things, cannot be shunned or evaded; UNAVOIDABLE more frequently suggests that which cannot be kept clear of or escaped by the exercise of care or foresight; as, *inevitable* as death, fate, to accept the *inevitable*; an *unavoidable* delay, accident; cf. the different connotations of: it was *inevitable* that they should meet; their meeting was *unavoidable.* Often, however, the distinction is one of emphasis only.

Syn. — INFER, DEDUCE, CONCLUDE, agreeing in the idea of reasoning from premises, are here compared in their ordinary usage; for technical distinctions, see defs. INFER is the general term for drawing a conclusion; it frequently implies little more than *surmise;* DEDUCE (see DEDUCTION) emphasizes more strongly than *infer* the formal processes involved; CONCLUDE suggests the arrival at the logical result of an act or process of inference; as, I *infer* from what you say that you were not present; I *deduce* my conviction of your absence from the failure of your account to tally with the facts; I *conclude,* upon a more careful examination of the evidence, that I was mistaken. See INFERENCE, POSTULATE, ASSUMPTION.

in-fer', *v. i.* To draw inferences.

To *infer* is nothing but, by virtue of one proposition laid down as true, to draw in another as true. *Locke.*

in'fer-ence (ĭn'fẽr-ĕns), *n.* [From INFER.] **1.** Act or process of inferring. *Inference* is the special mental act which constitutes a step in any process of reasoning; that is, it is the act of passing from one judgment to another, or from a belief or cognition to a judgment. In certain cases it consists in forming judgments from some habit of mind on the basis of cognitions or beliefs not explicitly recognized, and it is then called **unconscious inference.** In formal logic inferences are classified as *mediate* and *immediate* (see under those words); inductive logic treats all induction as an inferential process, that is, as made up of *inductive inferences.*

Inference . . . is the mediate reference of an ideal content to reality. *B. Bosanquet.*

2. That which is inferred; a truth or proposition drawn from another which is admitted or supposed to be true; a conclusion; a deduction.

These *inferences,* or conclusions, are the effects of reasoning, and the three propositions, taken all together, are called syllogism, or argument *I. Watts*

4. Something called forth or involved; a consequence, contingency, or adjunct. *Obs. & R.*

Syn. — INFERENCE, ASSUMPTION are often confused. An INFERENCE is a logical conclusion from given data or premises; an ASSUMPTION is something taken for granted without proof, frequently as a basis for argument or inference. To speak of an *inference* as an *assumption* weakens one's argument; to refer to an *assumption* as an *inference* insinuates a fallacy. See ASSUMPTION, INFER, CONJECTURE.

in-fil'trate (-trāt), *v. t.;* IN-FIL/TRAT-ED (-trāt-ĕd); IN-FIL/TRAT-ING (-trāt-ĭng). [*in-* in + *filtrate:* cf. F. *infiltrer.* Cf. INFILTER.] **1.** To cause to penetrate gradually; to infuse as by filtration.
2. To pass through or into as in filtering.

in-fil'trate, *v. i.* To enter by penetrating the pores or interstices of a substance; to filter into or through something.
The water *infiltrates* through the porous rock. *Addison.*

in-fil'trate, *n.* That which infiltrates; specif., *Med.,* a substance passing into the tissues and forming an abnormal accumulation.

in'fil-tra'tion (ĭn'fĭl-trā'shŭn), *n.* [Cf. F. *infiltration.*] Act or process of infiltrating, as of water into a porous substance, or of a fluid into the cells of an organ; also, the infiltrating substance; an infiltrate.
Calcareous *infiltrations* filling the cavities. *Kirwan.*

infiltration vein. *Mining.* A vein formed in country rock by interstitial deposition from percolating waters, usually with partial replacement of the minerals of the country rock.

in-fin'i-ta-ry (ĭn-fĭn'ĭ-tā-rĭ), *a.* Relating to infinity, or to the properties of a function for infinite values of its arguments.

in-fin'i-tate (-tāt), *v. t.;* IN-FIN'I-TAT'ED (-tāt'ĕd); IN-FIN'I-TAT'ING (-tāt'ĭng). [LL. *infinitare.*] *Logic.* To render infinite or indefinite by changing from positive to negative, that is, by prefixing the negative *not-* or *non-* to a term; thus, *not-A* or *non-A* is the *infinitated* correlative of *A. Infinitate* differs from *negate* in that it applies to terms as well as to propositions, and when applied to the latter the negative sign attaches to the predicate term rather than to the copula. Thus "the rose is not red" is a *negative* proposition; "the rose is nonrational" is an *infinitated* proposition. — **in-fin'i-ta'tion** (-tā'shŭn), *n.*

in'fi-nite (ĭn'fĭ-nĭt), *a.* [L. *infinitus:* cf. F. *infini,* OF. also *infinit.* See IN- not; FINITE.] **1.** Unlimited or boundless, as in time or space; as, *infinite* duration or distance.
Whatever is finite, as finite, will admit of no comparative relation with infinity; for whatever is less than *infinite* is still infinitely distant from infinity; and lower than *infinite* distance the lowest or least cannot sink. *H. Brooke.*
Infinite force or velocity is as contradictory an idea as *infinite* space. *B. Bosanquet.*
2. Indefinitely large or extensive; indefinite in number; immeasurable; innumerous; hence, vast; immense; also, inexhaustible. "A fellow of *infinite* jest." *Shak.* "*Infinite* riches." *Marlowe.* "*Infinite* calamity." *Milton.*
3. Without limit in power, capacity, knowledge, or excellence; boundless; immeasurably or inconceivably great; all-embracing; perfect; as, the *infinite* wisdom and goodness of God; — opposed to *finite.*
O God, how *infinite* thou art! *I. Watts.*
4. *Math.* **a** Greater than any assignable quantity of the same kind; — said esp. of a variable to which a value may be assigned greater than any preassigned value. **b** Equivalent to, or having the same power as, some proper part of itself; capable of being set in one-to-one correspondence with a part of itself; — said of an assemblage. *Infinite* and *boundless* must be carefully distinguished (*Riemann*); the former is metrical, the latter ordinal, as to the component elements. A circle is *boundless* since it is possible to proceed by one law from any point back to the same point again; so too is a sphere surface. But neither is *infinite* as to length or area, being less than assignable lengths and areas. What is left of a right line or a plane after a piece is taken away is bounded but is infinite; what is left of a circle or a sphere surface after a piece is taken away is both bounded and finite.
5. Indeterminate; vague; also, interminate; tediously long. *Obs.*
6. *Logic.* Infinitated.
Syn. — Boundless, immeasurable, illimitable, interminable, limitless, unlimited, endless, eternal.

The general term (or factor) may, instead, have an index that takes in succession all integral values. — **i. verb,** the adjectival and substantive forms of a verb (infinitive, gerund, supine, participle) collectively; — opposed to *finite verb.*

in'fi-nite (ĭn'fĭ-nĭt), *n.* That which is infinite; specif.: **a** Boundless space or duration; infinity. "The blue *infinite* [will] embrace us again." *J. Martineau.* **b** An infinity; incalculable or very great number. *Now Rare.*

in'fin-i-tes'i-mal (ĭn'fĭn-ĭ-tĕs'ĭ-măl), *a.* [From L. *infinitus* infinite: cf. F. *infinitésimal,* fr. *infinitésime* infinitely small, and the ending *-esimus* of some ordinal adjectives in Latin. See INFINITE, *a.*] **1.** Small at will; arbitrarily or indefinitely small; variable with 0 as its limit. Thus, the area between the inscribed and circumscribed regular polygons of n sides is *infinitesimal,* since by enlarging n it may be made and kept smaller than any preassigned area, however small.
2. Hence, immeasurably or incalculably small; very minute; extremely small or insignificant.

in-fin'i-ti-eth (-ĭ-tĭ-ĕth) } The ordinal corresponding to *infinite* used as a numeral; thus, the *infiniteth,* or *infinitieth,* power (the power whose exponent is infinite, as x^∞).

in-fin'i-ti'val (ĭn-fĭn'ĭ-tī'văl; ĭn-fĭn'ĭ-tĭv-ăl; 277), *a.* Pert. to the infinitive mood. — **in-fin'i-ti'val-ly,** *adv.*

in-fin'i-tive (ĭn-fĭn'ĭ-tĭv), *a.* [L. *infinitivus:* cf. F. *infinitif.* See INFINITE.] *Gram.* Unlimited; undefined; — applied to a certain verb form frequently, though inaccurately, classed as a mood.

in-fin'i-tive, *n. Gram.* That form of the verb which simply names the action without predicating it of a subject, being itself a noun with certain features of the verb, esp. that of taking an object and adverbial qualifiers. In Anglo-Saxon the infinitive had two forms; one for the nominative and accusative, ending in *-an* and not preceded by *to;* one for the dative, ending in *-anne* (sometimes called the *gerundal infinitive*), preceded by *to,* and employed chiefly in expressing purpose; as in, "Ic hæbbe mete *to etanne*" (I have meat *to eat*). The former is represented by the modern simple infinitive as used with the auxiliary verbs *may, can, might, must, could, would,* and *should,* and usually with *let, dare, do, bid, make, see, hear, need,* etc.; as in, you *may speak; let* me *go.* The latter is represented by the more common modern form with *to* (sometimes called a *supine*), which corresponds in sense to both the old infinitives. The verbal noun in *-ing,* though an infinitive by the definition and sometimes called one, is now generally classed as a *gerund.* It has the important distinction that it can be used after prepositions generally, as in "the pleasure of *knowing* him." See -ING, 2. The infinitive has differences of tense, in English only for present and perfect, as, in the active voice, *to see, to have seen;* in the passive voice, *to be seen, to have been seen,* all except the present active being periphrastic forms with auxiliaries and past participles. See HISTORICAL INFINITIVE.

in-fin'i-tude (-tūd), *n.* **1.** Quality of being infinite; infiniteness; also, that which is infinite; esp., a real (as distinguished from an ideal) infinity; the infinity of space or time or of divine being. "I am who fill *Infinitude.*" *Milton.*
2. Innumerable quantity; an infinity. "An *infinitude* of distinctions." *Addison.*

in-fin'i-ty (-tĭ), *n.; pl.* -TIES (-tĭz). [F. *infinité,* L. *infinitas.* See INFINITE.] **1.** The quality of being infinite; also, that which is infinite; unlimited extent of time, space, or quantity; eternity; boundlessness.
There cannot be more *infinities* than one; for one of them would limit the other. *Raleigh.*
The three unreal *infinities* of number, time, and space. *B. Bosanquet.*
Psychologically regarded, "large" and "small" are not purely relative terms; while, per contra, zero and *infinity* are simply negations. *James Ward.*
2. Unlimited capacity, energy, excellence, or knowledge; as, the *infinity* of God and his perfections.
3. Indefinite number; as, an *infinity* of beauties.
4. *Math.* An infinite; — denoted by ∞. No number is infinite; *infinity* signifies the increasing of the number beyond all limits.
5. *Geom.* That region of a line, plane, or space, which is infinitely distant from the finite region regarded. The infinity of a line is most commonly and conveniently regarded as a point, that of a plane as a line, that of space as a plane, — called the **point,** the **line,** the **plane,** at **infinity** (this last (plane) being thought as *double,* or as a degenerate **sphere at infinity** through an imaginary nodal circle). But in conformal representation and the theory of functions in general, the plane is regarded as closed in a *point at infinity* corresponding to some single finite point.

in-firm' (ĭn-fûrm'), *a.* [L. *infirmus.* See IN- not; FIRM, *a.*] **1.** Not firm or sound physically; weak; frail; of persons, of poor or deteriorated vitality, esp. as a result of age; feeble; as, an *infirm* body; an *infirm* constitution.

in-flec'tion-al, in-flex'ion-al (-ăl), *a.* Of or pertaining to inflection; having, or characterized by, inflection, esp. grammatical inflection.

Inflectional languages, languages so developed from the agglutinative stage that the root meanings are lost from the accessory elements to such an extent that these elements cannot serve as separable prefixes, suffixes, etc., but become mere conjugational and declensional forms, securely attached to the roots. Moreover, the form of the root itself may be modified to express different relations, and this by some authorities is held the sole true mark of inflection. Modification of the main root (ablaut), as in English be*gin*, be*gan*, be*gun*, or Arabic *qatala*, he killed, *qutila*, he has been killed, *qatil* killing, is the chief characteristic of Semitic inflections (see SEMITIC LANGUAGES). Modification of the relational or derivative elements is the chief characteristic of the Indo-European (see INDO-EUROPEAN LANGUAGES), the attachment of these elements to the root becoming permanent through phonetic changes, as in Latin *scribo*, I write, *scripsi*, I wrote, *potes*, subj. *possis*, thou canst. Inflectional languages, however, retain many agglutinative forms, as man-*ful-ly*, care-*less-ness*, in English, and in certain doubtful groups merge into the agglutinative (see AGGLUTINATIVE LANGUAGES); while, on the other hand, a tendency toward the isolating or monosyllabic form is observable in the **analytic languages**, or those in which prepositions, auxiliary verbs, etc., "analyze" the older inflected forms into combinations of independent words (cf. ISOLATING LANGUAGES). The chief analytic languages are: English; French, and to a less extent the other Romance tongues; modern Persian; and Hindustani. — **i. tangent.** *Math.* **a** The coincidence of two consecutive tangents to a curve regarded as an envelope of lines; a stationary tangent, as at a point of inflection. **b** *pl.* Asymptotes to the indicatrix at any point of a surface. 2. *Zoöl.* In modern usage, restricted to a class of Protozoa characterized by the presence of cilia, either throughout life or in the immature condition. They are generally regarded as the most highly organized of the protozoans; the form is definite; there are usually special places for the ingestion of food and the exit of excrementitious matter, and the processes for locomotion are often highly developed. Infusoria are to be found in any exposed body of water. The majority live free and active lives; others are attached by a stalk to aquatic weeds, stones, etc.; others are parasites. Only the largest are visible to the naked eye. The class contains the orders Ciliata and Tentaculifera, and in older classifications also the Mastigophora. See PARAMECIUM, HYPOTRICHA, EPISTYLIS, *Illusts.*

-ing (-ĭng). **1.** [For ME. *-end, -and, -ind,* AS. *-ende;* akin to Goth. *-and-,* L. *-ant-, -ent-,* Gr. *-ovт-.*] The suffix of the present participle; as, *singing* birds; a *daring* deed.
☞ The Anglo-Saxon ending of the present participle, *-ende,* was often later modified to *-inde,* regularly so in the southern dialect, and this became confused with *-inge* of the verbal noun (see def. 2, below), and finally became identical in form with it. The attributive use of the verbal noun, however, is in general easily distinguished from that of the participle. Thus, *drinking* water is not "water that drinks," but "water for drinking."

2. [ME. *-ing,* AS. *-ing, -ung;* akin to G. *-ung,* D. *-ing.*] A suffix used to form nouns, primarily abstract nouns of action from verbs, and also, by analogy, from nouns, adverbs, and other words. See *Introd., Rules for Spelling,* §§ 6, 7, 8, 11, 12. Its meanings are: **a** *Act* or *fact of doing* (what the verbal root denotes), often conveying the idea of *process, continuance, art,* or other modification, as of *time* or *place;* as in: speak*ing* comes before writ*ing;* we heard shout*ing* (continued or repeated shouts); a cry*ing* in the wilderness; he studies paint*ing* (the art).
☞ The idea of continuance often distinguishes the sense of verbal nouns from that of nouns identical in form with the verb, the latter denoting a single completed act. Thus, cf. "we heard a *shout;*" "a *cry* in the wilderness," with the examples above. The idea of art or practice is common in derivatives in *-ing* formed from nouns; as, blackberry*ing,* nutt*ing,* etc.
b Something causally associated with the act, often esp. in the *pl.;* as, sweep*ings,* earn*ings,* etc.: (1) *That which does* (what the verbal root denotes); as in: the cover*ing* of a bed. (2) The *product, accompaniment,* or *result of the act denoted,* or a *thing concretely representing it;* as in: the writ*ing* on the wall; a floor covered with shav*ings;* a winding and a moor*ing* in a river. (3) Collectively, *that which is used* in an act or process; —often formed from nouns denoting *material;* as, bedd*ing,* tub*ing,* quilt*ing,* roof*ing,* shirt*ing,* etc. In modern English the active verbal noun in *-ing* is freely used as a gerund, esp. in taking a direct object, and being qualified by an adverb. Thus, "Praised for the gallant surmount*ing* of his difficulty," may become, "Praised for gallantly surmount*ing* his difficulty." In careful usage, the gerund generally has the noun or pronoun denoting the agent of its action in the possessive case (as, "Reason for a savage's preferr*ing* many kinds of food," *Thoreau*), except in constructions where a possessive would be awkward, or where a participial construction is suggested; as, "On the general and his staff appear*ing*." *Oxf. E. D.* "We read . . . of Cato tear*ing* out his entrails." *Macaulay.*

3. [AS. *-ing.*] A suffix denoting *belonging to, of the kind of, descended from,* used to form nouns, esp. patronymics and diminutives; as in athel*ing,* shill*ing,* farth*ing,* etc.

In/ga (ĭn/gă), *n.* [Tupi.] *Bot.* A large genus of tropical mimosaceous trees with odd-pinnate leaves and white or red flowers, the large pods having thickened margins. They yield useful timber, and the sweet white pulp inclosing the seeds in some species is edible.

in/gate/ (ĭn/gāt/), *n.* [*in,* adv. + 4th GATE.] *Founding.* The gate, or any of several gates, through which the metal is poured into a mold.

in/gath/er (ĭn/găth/ĕr), *v. t. & i.;* -ERED (-ĕrd); -ER-ING. To gather in or together, collect; esp., to harvest.

in/gath/er-ing (ĭn/găth/ĕr-ĭng), *n.* Act of gathering; esp., the gathering of the fruits of the earth; harvest.

in-hab'it-ant (-tănt), *n.* [L. *inhabitans, -antis,* p. pr. of *inhabitare:* cf. OF. *inhabitant.*] One who dwells or resides permanently in a place, as distinguished from a transient lodger or visitor; as, an *inhabitant* of a house, a town, a city, county, or state. "Frail *inhabitants* of earth." *Cowper. Inhabitant* is not a term of exact meaning. It ordinarily implies more fixity of abode than *resident,* but is variously construed according to the context, sometimes, for example, as equivalent to *citizen* (103 *U. S.* 683; 32 *Conn.* 47), sometimes as not (86 *Ind.* 118; 122 *Mass.* 594), etc. Ordinarily *inhabitant* is not a synonym for *citizen* or *resident.* See RESIDENT; cf. CITIZEN, DOMICILE. A corporation is legally an inhabitant of the place where its principal office is in the State of its organization (151 *U. S.* 496); and a foreign corporation doing business in a State and complying with the necessary laws has also been held to be an inhabitant of that State (69 *Fed.* 704).
Syn. — INHABITANT, CITIZEN, DENIZEN are here compared esp. in their literary implications; for more technical legal distinctions, see defs. INHABITANT, the general term, implies permanent abode; CITIZEN, enjoyment of the full rights and privileges of allegiance; DENIZEN (sometimes merely poetical or elevated for *inhabitant*) often suggests admission by favor to privileges not claimable as rights; as, "The Princess: liker to the *inhabitant* of some clear planet close upon the sun, than our man's earth" (*Tennyson*); "If a man be gracious and courteous to strangers, it shows he is a *citizen* of the world" (*Bacon*); "Goethe says of a great poet that he must be a *citizen* of his age as well as of his country" (*Lowell*); "I too would live and work as beseems a *denizen* of this universe" (*Carlyle*); "Thine angels . . . native in heaven's fair palaces, where we shall be but *denizened* by thee" (*Donne*); "I am as pleased as Punch at the thought of having [through the Doctorate] a kind of *denizenship,* if nothing more, at Oxford" (*Lowell*). Syn. — Introduce, admit, instate, induct; begin, commence, open. — INITIATE, INAUGURATE, INSTALL agree in the idea of introduction or admission. To INITIATE is to admit to some (esp.) secret organization or to indoctrinate in some (esp.) occult knowledge or observance; it frequently implies mysterious rites or ceremonies; to INAUGURATE is to induct into office, esp. with formal or dignified ceremony; to INSTALL is to instate in a position of office or dignity, or to invest with (esp.) an ecclesiastical charge; as, to *initiate* one into a secret society, *initiated* in the mysteries of his profession; to *inaugurate* the President of the United States; to *install* a canon, a Knight of the Garter, to *install* a minister in a new charge. INITIATE, INAUGURATE come further into comparison in the sense of *begin*, with emphasis upon the (frequently formal) act of beginning. *Inaugurate* in particular heightens the implication of formality or ceremony, and properly applies only to something of dignity or importance; it is frequently misused as a grandiloquent synonym for *begin* or *open*; as, the new method of procedure was *initiated* under favorable conditions; the French Revolution was felt by many to have *inaugurated* a new era; "In fine writing . . . not only presidents, but aqueducts, millinery shops, and miners' strikes, are '*inaugurated*'" (*A S. in-jec'tor (-tẽr), *n.* One that injects; specif., a device for injecting feed water into a steam boiler by the direct action of live steam. This injector consists essentially of a nozzle continually surrounded by water. Steam is blown through the nozzle and creates a vacuum into which the water rushes, and, mixing with the steam, and further impelled by the pressure of steam from behind and by the added momentum of the mixed steam, is forced along the feed pipe into the boiler. The boiler injector is often called **Giffard's injector**, from the name of the inventor.

3. *Law.* An equitable writ or process, granted by a court of equity, whereby a party is required to do or to refrain from doing certain acts, according to the exigency of the writ or process. The *injunction* was originally granted only by writ by a court of chancery or equity, and was derived from the interdict (which see) of the Roman and Civil law systems, to which it corresponds; it is now, under statutory authority, granted by judgment or order in British practice and in many States in the United States. Injunctions, according to the nature or extent of the relief granted, are variously termed *restrictive*, or *restraining*, and *mandatory*; *preliminary*, *interlocutory*, *ad interim*, *temporary*, or *provisional*; and *final*, *perpetual*, or *permanent*. The violation of an injunction is a contempt of court, and the court can enforce fulfillment of its injunction by fine or imprisonment. The issuing of injunctions to restrain various acts, esp. acts of participants in labor strikes, boycotts, etc., has been (opprobriously) called, by those opposed to such judicial action, *government by injunction*, though such action is not founded on any extension of judicial powers beyond those of the common law.

INJUSTICE applies to whatever is not just; WRONG, as here compared, is a stronger, more positive and personal, term; a GRIEVANCE is a real or imaginary wrong which is regarded as a ground for complaint; as, "I have met with much *injustice* in this world; no difference has been made by God or man . . . 'twixt good or evil, as regarded me" (*Shelley*); "We are . . . steel to the very back, yet wrung with *wrongs* more than our backs can bear" (*Shak.*); "I have often wished that I had clear for life, six hundred pounds a year. . . . The keeper of the inn (properly so called) is absolutely liable at the common law to his guest for the safety of his goods except when they are lost by act of God, the public enemy, or the guest's gross negligence; but this liability has been modified in Great Britain and in most or all of the United States. The innkeeper must entertain all travelers or wayfarers who are of good conduct and ready to pay the proper charges; the boarding-house keeper may refuse accommodations to any one he chooses. The term *hotel* is legally synonymous with *inn.*

Syn. — Native, natural, original, inherent, constitutional, intrinsic, instinctive, ingrained, inveterate; inherited, transmitted, ancestral. — INNATE, INBORN, INBRED, CONGENITAL, HEREDITARY. *Innate* (the Latin term) and *inborn* (the Saxon term) are often used without distinction; but INNATE (opposed to *acquired*) is frequently synonymous, in a broad sense, with *native, natural, inherent,* or *essential;* INBORN retains more specific reference to that which is actually born in one; INBRED suggests qualities which have become deeply rooted or firmly ingrained (as by education, training, or habit of life); as, "the spirit of prophecy which is *innate* in every man" (*Emerson*); "the magnetism of *innate* fitness" (*Hawthorne*); *innate* ideas, *inborn* aptitudes; "Man, immured in cities, still retains his *inborn* unextinguishable thirst of rural scenes" (*Cowper*); "those *inbred* sentiments which are the faithful guardians, the active monitors of our duty, the true supporters of all liberal and manly morals" (*Burke*). That is CONGENITAL (frequently pathological) which exists from birth; HEREDITARY emphasizes the idea of transmitted or derived qualities; as, *congenital* deafness; "the theory that what was acquired habit in the ancestor may become *congenital* tendency in the offspring" (*W. James*); "that part of the soul which loves twilight . . through some *congenital* uneasiness or distress, perhaps, in its processes of vision" (*W. Pater*); *hereditary* instincts; "In 'Hereditary Genius' I showed that scholastic success runs strongly in families" (*F. Galton*). See NATIVE, INTRINSIC, INVETERATE, IMPLANT.

innate ideas, *Metaph.*, ideas, as of God, immortality, right and wrong, supposed by some to be inherent in the mind, as a priori principles of knowledge.

With the taunting questions put to Descartes, and his example about the heredity of good breeding and the gout, the question of the *innate ideas* enters modern philosophy. *Josiah Royce.*

in'nat-ism (ĭn'năt-ĭz'm), *n.* Innate ideas, or belief in them.

2. Of or pertaining to the mind or spirit or its phenomena.

This attracts the soul,
Governs the *inner* man, the nobler part. *Milton.*

Then come the metaphysical travesties of *inner* and outer, which refer originally and literally to space divided into two compartments by a man's skin. But presently, since it is said there is nothing in the intellect but what first came through sense, "*inner*" comes to mean the whole of each one's experience as it is for him, the psychical side of his particular brain; *inner* is then the equivalent of subjective. *James Ward.*

3. Not obvious or easily discovered; obscure; indistinct.

4. *Chem.* Intramolecular; as, an *inner* anhydride.

5. *Phon.* Of a sound, having the place of articulation nearer the throat than that of another sound classed as *outer.*

Syn. — INTER, INWARD, INSIDE, INTERIOR, INTERNAL, INTESTINE are in many cases interchangeable. INNER (which sometimes retains its comparative force) and less frequently INWARD (commonly with the suggestion of motion) may be used of spatial relations; as, "[He] thrust them into the *inner* prison" (*Acts* xvi. 24); an *inner* room, the *inner* bark of a tree; an *inward* curve. Both words apply also to that which is mental or spiritual, frequently with the added implication of something intimate or secret; as, "the sense by which thy *inner* nature was apprised of outward shows" (*Shelley*); the *inner* life, the *inner* light; "Though our outward man perish, yet the *inward* man is renewed day by day" (*2 Cor.* iv. 17); "that *inward* eye which is the bliss of solitude" (*Wordsworth*). INSIDE is used only of spatial relations; as, an *inside* seat, the *inside* track. INTERIOR and INTERNAL commonly suggest more abstract or technical, less intimate, relations than *inner* and *inward;* as, an *interior* angle, *internal* contact. *Interior* frequently implies contrast with the exterior, or outer, limits of the thing itself; *internal,* with that which lies outside of, or external to, it; as, *interior* decorations, the *interior* features of the country (as opposed to those of the coast or frontier), cf. the Department of the *Interior; internal* (i. e., domestic, as opposed to foreign) affairs, *internal* revenue, *internal* evidence. INTESTINE is synonymous with *internal* in the sense of *domestic, civil;* it applies almost exclusively to that which is evil or mischievous; as, "the *intestine* shock . . . of civil butchery" (*Shak.*); "*intestine* broils" (*Milton*); "*Intestine* war no more our passions wage" (*Pope*). See INTRINSIC; cf. OUTER.

It is determined by the formulæ: $[e_1 \mid e_1] = 1, [e_2 \mid e_2] = 1, [e_1 \mid e_2] = -(e_1 e_1) = 0, [e_2 \mid e_1] = (e_2 e_2) = 0$; if $a = a_1 e_1 + a_2 e_2$, $b = \beta_1 e_1 + \beta_2 e_2$, $[a \mid b] = a_1\beta_1 + a_2\beta_2 = [b \mid a]$, that is, the commutative law holds. The product vanishes when the factors lie outside of one another. The *e*'s are Grassmann's **extensive units.** — **inner,** *or* **internal, sense,** the mind's capacity to be aware of its own states.

Syn. — Catechize, examine, interpellate ; doubt, dispute, challenge. — ASK, INQUIRE, INTERROGATE, QUESTION, QUERY. ASK, as here compared (see ASK), is the general term for putting a question ; as, "The high priest then *asked* Jesus . . . of his doctrine. Jesus answered him, . . . Why *askest* thou me ? *ask* them which heard me" (*John* xviii. 19-21). To INQUIRE is to ask for information ; it may or may not imply authority in the one who asks ; as, "If you will pass to where you are bound, you must *inquire* your way" (*Shak.*) ; a commission to *inquire* into an abuse. To QUESTION is to inquire by putting repeated questions ; in the sense of "calling in question" it implies distrust or hostility ; as, "Her father loved me ; oft invited me ; still *questioned* me the story of my life, from year to year" (*Shak.*) ; to *question* one's veracity. To INTERROGATE is to question formally or systematically, esp. in order to elicit some particular information ; as, "They proceeded most severely, and examined many witnesses . . . whom they *interrogated*, not only upon the express words of the statute, but upon all . . . collateral or presumptive circumstances" (*Burnet*). 3. [*cap.*] *R. C. Ch.* A court or tribunal for the discovery, examination, and punishment of heretics. The general tribunal (officially called the **Holy Office**) for suppression of heresy was developed under Innocent III. (Pope 1198-1216) and Gregory IX. (Pope 1227-41). Its operations were chiefly confined to Spain, Portugal, and their dependencies, and a part of Italy. The Spanish Inquisition, as reorganized and put under state control toward the end of the 15th century, in the 16th century conducted its proceedings with notorious cruelty. The Inquisition was abolished in France in 1772 and in Spain, finally, in 1834. The Congregation of the Holy Office still exists, its chief concern now being with heretical writings.

the mind as not to know the nature and quality of the act he was doing, or, if he did know, that he did not know he was doing what was wrong." Thus rule does not absolve from criminal responsibility for acts done under the influence of an uncontrollable impulse, if the actor knows that the act done is morally wrong; but there is a tendency to recognize such an impulse as a sufficient defense in such a case, as is done in some of the United States and in South Africa. The nature and degree of insanity required to affect a person's civil capacity varies with the nature of the case, the general test being as to whether with respect to the matter in hand the person can act rationally, understanding the nature of his act and the natural consequences of it in affecting his rights, obligations, and liabilities.

They belong to the class Insecta, comprising six-legged, usually winged forms, as beetles, bugs, bees, flies, etc., and to other allied classes of arthropods whose members are wingless and usually have more than six legs, as spiders, mites, ticks, centipedes, wood lice, etc. In ignorant and careless usage (esp. formerly), any small animal, as an earthworm, coral polyp, etc.

in-sec'ta (ĭn-sĕk'tă), *n. pl.* [NL. See INSECT.] *Zoöl.* **1.** In the broadest sense, a class of arthropods comprising the true insects (see def. 3), the Myriapoda, and the Arachnida. Nearly equiv. to *Tracheata. Obs.*

2. In a more restricted sense, a class consisting of the true insects (see def 3) together with the Myriapoda. Equiv. to *Antennata.*

3. In the usual modern usage, in a still further restricted sense, a class constituted by those having three clearly defined body regions, *head, thorax,* and *abdomen,* and only three pairs of legs; the true insects, — equiv. to *Hexapoda.* The head bears the eyes, one pair of antennæ, and three pairs of mouth parts. The thorax has three segments, prothorax, mesothorax, and metathorax, each of which bears a pair of legs, while the last two usually also bear each a pair of wings. The abdomen consists, with few exceptions, of from seven to ten segments, and is without true jointed appendages, but may be provided with an ovipositor, sting, claspers, etc. The Insecta breathe air, at least in the adult stage, for which purpose there is usually an internal system of tracheæ opening by spiracles along the sides of the body. Some of the Insecta hatch from the egg with nearly the form (but not the size) of the adult, but oftener there is a more or less complete metamorphosis (which see). The class Insecta is known to have existed since the Silurian, and is by far the largest class of animals, exceeding all other land animals together in number of species and individuals; it is represented in every habitable land. According to a conservative estimate it comprises at least 2,000,000 species, of which 250,000 are known to science. Though most of them are terrestrial, many inhabit fresh water, at least for part of their life. The majority are vegetable feeders, some forms causing enormous economic losses by their injury to cultivated plants. Others are troublesome parasites of man or of domesticated animals, and dangerous as carriers of disease germs. On the other hand, many species are useful in causing the cross-pollination (which see) of plants, and a few (as bees and silkworms) produce useful substances. The class has been variously subdivided. The orders recognized by three well-known authorities are:

Sharp	*Packard*	*Brauer*
Aptera	Thysanura	Synaptera
Orthoptera	Dermaptera	Dermaptera

insurable interest, *Insurance Law,* such an interest as will be legally sufficient to prevent an insurance from having the nature of a wager or gambling contract (see INSURANCE, WAGER); that is, such an interest in the subject of insurance as would suffer legal damage, detriment, or prejudice in the event of the happening of the perils insured against. As to just what such an interest is in respect of life insurance there is no generally accepted opinion. The British rule is that there must be a pecuniary interest, and ties of blood or affection will not suffice (10 *Barnp. & Cress.* 724); but the American courts, though adopting a wider view, do not follow any definite or generally accepted opinion. In respect of property, as in fire and marine insurance, a property interest that would give the holder a standing in court in case of an action involving the title is required.
in-sur'ance (-ăns), *n.* [From INSURE.] **1.** Act of insuring, or assuring, against loss or damage by a contingent event; a contract whereby, for a stipulated consideration, called a *premium,* one party undertakes to indemnify or guarantee another against loss by a certain specified contingency or peril, called a *risk,* the contract being set forth in a document called the *policy* (a temporary memorandum, called a *binder,* being often issued in case of fire insurance pending the issuance of the policy); also, the business of making such contracts. See POLICY, PREMIUM, RISK, INSURABLE INTEREST, REPRESENTATION, WARRANTY, TONTINE, MUTUAL PLAN, RESERVE, UNDERWRITER, etc.
☞ The term *assurance* is of earlier use than *insurance* both of marine and life insurance, and is retained with these applications in the titles and policies of various of the older British companies. In the United States and in popular British usage *insurance* is the term generally used for all forms of insurance. In the usage of British insurance companies *insurance* is similarly used by some; but by the majority the term *assurance* is commonly used for life insurance, and the term *insurance* for marine, fire, or accident insurance

and form-receiving powers of the mind. The Scholastics rendered these ‖ in/tel-lec'tus a'gens (ĭn'tĕ-lĕk'tŭs ā'jĕnz) and (usually) ‖ in/tel-lec'tus pos-si'bi-lis (ɒ s-ĭ b'ĭ-lĭ s). Thomas Aquinas defined the former, the active, or agent, intellect, as the power of active thought operating upon the intelligible forms, or phantasmata, which the possible intellect, or receptive faculty, made apprehensible. For the Scholastics, the general conception of the *intellect* was that of a faculty of penetrating appearances and getting at the substance through abstraction from and elimination of the unimportant. The dividing intellect, through analysis, creates and deals with ideas; the combining intellect judges and reasons. English writers have in general remained close to the Scholastic sense of the term. With Cudworth and other Platonists the tendency is to treat *intellect* as the faculty of apprehending the higher truths or immutable essences which correspond to the Platonic Ideas; and members of the Scottish intuitional school considered it the faculty of knowing a priori truths or principles. In modern psychology, however, it is a broad designation for the whole cognitive power or function of the mind, and so is distinguished from *feeling, sensation, volition, conation.*

Syn. — INTENSIFY, AGGRAVATE. 7. *Logic.* A concept or notion; esp., a concept considered as a product of attention directed to the object conceived. The use of *intentio* [L.] as a term in Scholastic logic originated as a translation from the Arabic of Avicenna (980–1037), who distinguished direction of attention to things, the first intention, from thought about things, the second intention. Hence, the *first intention* came to mean a conception of a thing formed by the first or direct application of the mind to the individual object, as *man*, *stone*; and the *second intention*, a conception generalized from first intention, that is, an object of reflection such as a classified notion, as *species*, *genus*, *whiteness*.

Syn. — INTENTION, INTENT, PURPOSE, DESIGN, AIM, OBJECT, END are here compared in their general senses; for technical distinctions, see defs. INTENTION, which often suggests little more than what one means or proposes to do, implies less settled determination than PURPOSE, less definite plan or prearrangement than DESIGN, which frequently adds the implication of crafty or artful scheming; as, "She had not had an *intention* or a thought of going home, until she had announced it to him as a settled *design*" (*Dickens*); his *intentions* are good; cf. to declare one's *intentions*; "My *purpose* holds to sail beyond the sunset, and the baths of all the western stars, until I die" (*Tennyson*); "I go amongst the buildings of a city and I see a man hurrying along — to what? The creature has a *purpose* and his eyes are bright with it" (*Keats*); "envious commands, invented with *design* to keep them low" (*Milton*); "Should he find me here, [he] would discover my name, and perhaps my *designs*, to the rest of the family" (*Goldsmith*); cf. "*designing* lovers" (*id.*). INTENT is chiefly legal or poetical; as, *intent* to deceive, to kill; "the power of a sublime *intent*" (*Shelley*). AIM emphasizes directness of purpose, OBJECT that on which activities are focused, END that towards which they tend as their consequence or their final cause; as, "to [his trust] keeps faithful with a singleness of *aim*" (*Wordsworth*); "her steadiness and courage in the pursuit of her *aims*" (*J. R. Green*); "Yet in the luxury of freedom I began to wish for the daily task, the active pursuit, which gave a value to every book, and an *object* to every inquiry" (*Gibbon*); the *object* of education, a man without an *object* in life; "I see in part that all, as in some piece of art, is toil cooperant to an *end*" (*Tennyson*); "Man's chief *end* is to glorify God and to enjoy him forever" (*Westminster Catechism*). Hence, that in which one has such an interest; esp., business affairs; business; concernment; as, his *interests* are in foreign parts; his money is invested in mining *interests.* **2.** Concern, or the state of being concerned or affected, esp. with respect to advantage, personal or general; hence, good, regarded as a selfish benefit; profit; benefit.

It may be intellectual, or sympathetic and emotional, or merely personal, as, an *interest* in philosophical research; an *interest* in human suffering; the *interest* which an avaricious man takes in money getting.

> Perhaps, in its most common use, the word *interest* stands for a permanent disposition or capability of being actually interested. Thus we may say of a person that he is "interested in mathematics," although he may not at the moment be thinking of mathematics at all. *G. F. Stout*

6. The condition or quality of exciting concern or of being of moment; as, questions of *interest*; scholarly *interests.* **7.** Injury; also, compensation for injury, damages. *Obs.* **8.** The price or rate of premium per unit of time that is paid by a borrower for the use of what he borrows; specif., a rate per cent of money paid for the use of money or the forbearance of demanding payment of a debt; also, the system of permitting or requiring this payment, or the money so paid. Interest that is paid only on the principal lent is called **simple interest**; when paid on unpaid interest (usually periodically added to the principal) besides the original capital it is called **compound interest.** In Roman Dutch law interest is classified as **compensatory interest**, covering the creditor's direct loss from forgoing the use of his money, **penal interest**, paid by the debtor for a default; **lucrative interest**, representing the creditor's possible profits from his having the use of his own money. The Roman law distinguished between the damages that a creditor might exact from a defaulting debtor, and interest (called **fænus**, less correctly **fenus**, or incorrectly **fœnus**), which latter was prohibited or limited by strict laws, except the **fænus nauticum**, or interest on certain maritime loans, which was less restricted. Compound interest was designated as **usuræ usurarum.** The Canon law forbade all *interest* as such, to which the term **usura** came to be applied; but always allowed the creditor's exaction, under the name of *interest*, of damages when they could be shown to have actually arisen (**damnum emergens**) and later of a sum stipulated for as the loss of profit (**lucrum cessans**). With the development of the modern commercial and industrial system the restrictions were gradually abandoned, and the use of the term *interest* was extended until it came to have its present significance, the term **usury** being restricted to those cases where excessive interest is demanded. Concerning the nature and causes of interest there is no definite agreement among economists. Most economists, however, agree that *interest* has two meanings: a certain relatively fixed rate called **net interest**, representing the pure payment for the mere loan, and a larger and more variable sum called **gross interest**, which includes one or more other things, such as payment for risk, depreciation, etc. In some theories interest has been variously considered to represent: (1) the result of difference of value of present goods and future goods; (2) the price paid for the use of productive capital; (3) the payment to the capitalist for his abstinence; (4) with certain socialists, as Rodbertus and Marx, wealth obtained by exploitation of labor. **9.** Any excess over and above an exact equivalent; — chiefly in the phrase *with interest.*

> With all speed
> You shall have your desires with *interest.* *Shak.*

in-ter'nal-com-bus'tion, *a. Mach.* Designating, or pertaining to, any engine (called an **internal-combustion engine**) in which the heat or pressure energy necessary to produce motion is developed in the engine cylinder, as by the explosion of a gas, and not in a separate chamber, as in a steam-engine boiler. Cf. EXPLOSION ENGINE. The gas used may be a fixed gas, or one derived from alcohol, ether, gasoline (petrol), naphtha, oil (petroleum), etc. There are three main classes: (1) **gas engines** proper, using fixed gases, as coal, blast-furnace, or producer gas; (2) engines using the vapor of a volatile fluid, as the typical **gasoline (petrol) engine**; (3) **oil engines**, using either an atomized spray or the vapor (produced by heat) of a comparatively heavy oil, as petroleum or kerosene. In all of these the gas is mixed with a definite amount of air, the charge is compressed in the cylinder and is then exploded either by a flame of gas (**flame ignition** — now little used), by a hot tube (**tube ignition**), or by an electric spark (**electric ignition**), the last being the usual method in gasoline engines. See AFTERBURNING. Gas and oil engines are chiefly of the stationary type. Gasoline engines are largely used for automobile vehicles, boats, etc. Most internal-combustion engines use the Otto (four-stroke) cycle, though many use the two-stroke cycle. See OTTO CYCLE, TWO-CYCLE. They are almost universally trunk engines and single-acting. Because of the intense heat produced by the frequent explosions, the cylinders must be cooled by a water jacket (**water-cooled**) or by air currents (**air-cooled**) to give the maximum thermodynamic efficiency and to avoid excessive friction or seizing.

The cycle is completed in four strokes (see figs. 1 to 4). In fig. 1 the Inlet Valve *a* is opened by Cam *c* while *b* is kept closed and the explosive charge is sucked into the Cylinder. In fig. 2 both valves are kept closed and the charge is compressed. In fig. 3 the charge is exploded by a spark at the Spark Plug *l* at about the beginning of the stroke, and the working stroke takes place, both valves being kept shut. In fig 4 the Exhaust Valve *b* is opened by Cam *d* while *a* is kept shut, and the products of combustion escape through *b*.

The cycle is completed in two strokes (see figs. 1 and 2). In fig. 1 the Piston is moving upward, compressing the explosive charge pushed in during the previous down stroke, and sucking a supply of the explosive mixture into *b* through *a*. In fig. 2 the mixture or charge is exploded in the cylinder by a spark at the Spark Plug, at about the beginning of the down stroke, and the working stroke takes place. As the Piston moves downward, it uncovers *f*, through which the products of combustion escape, being displaced by a new charge which is forced from the Crank Chamber by the down-coming Piston, through *c* into the Cylinder, the Projection *d* deflecting the charge to the top of the Cylinder, so as to more effectually replace the exhaust gases.

Its walls, which contain numerous glands, consist of an internal mucous membrane, a submucosa, a muscular coat of two layers (the inner with circular, the outer with longitudinal fibers), and in most parts an external serous coat. Its muscles are nonstriated and perform peristaltic movements. The first four fifths of the intestine constitutes the *small* intestine, comprising the duodenum, jejunum, and ileum (see these terms); the remaining fifth, the *large* intestine, comprising the cæcum, colon, and rectum, and distinguished by its larger diameter, sacculated form, and by the absence of certain structures (see VILLUS, VALVULÆ CONNIVENTES) present in the small intestine. Besides serving to carry off waste matter, the intestine, esp. the first part of it, is the seat of the completion of digestion and (by means of the blood vessels and lacteals in its walls) of the absorption of nourishment. In vertebrates below mammals the distinction between large and small intestine is often not well marked. In many invertebrates the intestine is not convoluted, being an almost straight tube, and when, as is sometimes the case, no stomach is present, the term is applied to the whole digestive tract. 1. A looking upon; a seeing either with the physical eye or with the "eye of the mind," contemplation; sight. *Obs.*

2. *Philos.* Immediate apprehension or cognition; either the faculty or power of such apprehension or a particular act or instance of it. *Intuition* is applied to direct or immediate knowing, whether mystical, perceptional, intellectual, or moral; and is, in general, contrasted with speculative, reflective, or mediate knowing. From the etymological meaning of *intuition*, as a direct inspection or looking upon something, arose, on the one hand, the meaning of immediate knowledge of spiritual things, mystical vision, or spiritual perception such as the angels have; and, on the other hand, the various meanings in relation to sense perception; so that it denotes: (1) perception considered as objective in contrast to perception as subjective, or sensation; (2) perception in contrast to imagination; (3) perception in contrast to conception. A further development contrasts *intuitive* with *discursive* or *reflective* knowledge; as when Locke calls *intuition*, knowledge obtained by bare inspection of mental data, e. g., the direct perception that black is not white, a circle not a triangle, that three are more than two; and again when Mill states that "truths known by *intuition* are the original premises from which all others are inferred." With Kant *intuition* (*Anschauung, intuitus*) is, first, *empirical*, when relating to objects through sensation; second, *pure*, when it exists as the a priori representation of time and space; third, *intellectual*, when denoting a power of understanding akin to sense immediacy. *Intellectual intuition* had been previously applied to mystical vision, and by Fichte, Schelling, and later writers, was used for direct apprehension of the ego, the absolute, God. In morals, *intuition* is used for immediate apprehension or innate conceptions of right and wrong, as due to a special moral faculty or sense. Cf. ANSCHAUUNG; see KNOWLEDGE.

3. Knowledge obtained, or the power of knowing, without recourse to inference or reasoning; innate or instinctive knowledge; insight; familiarly, a quick or ready insight or apprehension. "Sagacity and a nameless something more, — let us call it *intuition.*" *Hawthorne.*

2. *Math.* **a** Opposite in nature and effect; — said with reference to any two operations, which, when both are performed in succession upon any quantity, reproduce that quantity; as, division is an operation the *inverse* of multiplication. The symbol of an inverse operation is often the symbol of the direct operation with —1 as an index. Thus $\sin^{-1}x$ means the angle or number whose sine is x. The inversion of a direct operation does not in general yield a *unique* result; thus $y=x^2$ gives only one value of y for any value of x; so also $y=\sin x$, $y=e^x$; but the inverse $x=\sqrt{y}$ has *two* values, while the other inverses, $x=\sin^{-1}y$ and $x=\log_e y$, have infinitely many values. A direct operation may have more than one inverse, thus the inverses of the direct operation $y=x^a$ are $x=\sqrt[a]{y}$ and $a=\log_x y$. The solution of a differential equation may be regarded as the inversion of a whole series of direct operations of derivation. **b** Designating a method of finding a curve from its given tangent.

By the concordat of Worms in 1122 the emperor resigned this kind of investiture, retaining investiture by the scepter only. Investiture per annulum et baculum has been at times used in the donative investiture of English bishops.

Iodine is always found combined, as in the iodides, which occur widely but sparingly in sea water, mineral waters, the mineral iodyrite, certain plants, etc. Iodine was discovered in 1811 by Courtois. It is prepared from kelp (ashes of seaweeds) and latterly from crude Chile saltpeter. It melts at 116° C. and boils at 183°. It dissolves with much difficulty in water, but easily in chloroform, carbon disulphide, or alcohol. Iodine vapor, as ordinarily seen, is reddish violet ; its molecular formula is I_2 at 700°, I at 1700°. The free element, even in very minute quantities, colors starch blue. Chemically it resembles chlorine and bromine, but is less active. Iodine and its compounds are largely used in medicine (as in liniments, antisyphilitics, etc.), in photography, in the manufacture of dyes, and in iodometry.

I'on (ī'ŏn), *n.* [Gr. *ἰόν*, neut. of *ὠών*, p. pr. of *ἰέναι* to go.] **1.** One of the substances which appear at the respective poles when a body is subjected to electrolysis, that one appearing at the anode being called the *anion*, the other the *cation.* *Faraday.*

2. One of the electrified particles into which, according to the electrolytic dissociation theory, the molecules of electrolytes are divided by water and other solvents. An *ion* consists of one or more atoms and carries a unit charge of electricity, 3.4×10^{-10} electrostatic units (see ELECTRON), or a multiple of this. Those which are positively electrified (hydrogen and the metals) are called *cations* ; negative ions (hydroxyl and acidic atoms or groups) are called *anions.* Thus, hydrochloric acid (HCl) dissociates, in aqueous solution, into the hydrogen ion, H^+, and the chlorine ion, Cl^- ; ferric nitrate, $Fe(NO_3)_3$, yields the ferric ion, Fe^{+++}, and nitrate ions, NO_3^-, NO_3^-, NO_3^-. When a solution containing ions is made part of an electric circuit, the cations move toward the cathode, the anions toward the anode. This movement is called **migration,** and the velocity of it differs for different kinds of ions. If the electromotive force is sufficient, electrolysis ensues : cations give up their charge at the cathode and separate in metallic form or decompose water, forming hydrogen and alkali ; similarly, at the anode the element of the anion separates, or the metal of the anode is dissolved, or decomposition occurs.

3. One of the small electrified particles into which the molecules of a gas are broken up under the action of the electric current, of ultraviolet and certain other rays, and of high temperatures. To the properties and behavior of ions the phenomena of the electric discharge through rarefied gases and many other important effects are ascribed. At low pressures the negative ions appear to be electrons ; the positive ions, atoms minus an electron. At ordinary pressures each ion seems to include also a number of attached molecules. See ELECTRON. Ions may be formed in a gas in various ways. See IONIZE.
